TABLE OF CONTENT

Chapter 1	General introduction and outline of the thesis	9
Chapter 2	Body mass index trajectories in relation to change in lean mass and physical function: the Health, Aging and Body Composition Study.	29
Chapter 3	Associations of BMI and adipose tissue area and density with incident mobility limitation and poor performance in older adults.	47
Chapter 4	Muscle quality and muscle fat infiltration in relation to incident mobility disability and gait speed decline; the Age, Gene/Environment Susceptibility-Reykjavik Study.	63
Chapter 5	Muscle quality and myosteatosis: novel associations with mortality risk; the Age, Gene/Environment Susceptibility-Reykjavik Study.	83
Chapter 6	Plasma phospholipid polyunsaturated fatty acids are associated with greater muscle and knee extension strength but not with changes in muscle parameters in older adults.	103
Chapter 7	Polyunsaturated fatty acids in relation to incident mobility disability and decline in gait speed; the Age, Gene/Environment Susceptibility-Reykjavik Study.	125
Chapter 8	General discussion	143
	Summary	161
	Samenvatting	167
	Acknowledgment	173
	Publication list	177
	About the author	181
