## Table of Contents

<b>Summary</b>	<b>9</b>
<b>Samenvatting</b>	<b>15</b>
<b>1. Introduction</b>	<b>21</b>
1.1 The importance of land use in integrated global change modeling	21
1.2 Objectives	23
1.3 Guide for readers	25
References	26
<b>2. Long term dynamic modeling of global population and built-up area in a spatially explicit way: HYDE 3.1</b>	<b>31</b>
Abstract	31
2.1 Introduction	31
2.2 Methodology and data	32
2.3 Results	36
2.4 Concluding remarks	42
References	42
Supplementary material	45
<b>3. The HYDE 3.1 spatially explicit database of human induced global land use change over the past 12,000 years</b>	<b>49</b>
Abstract	49
3.1 Introduction	49
3.2 Methodology and data	52
3.3 Results	54
3.4 Concluding remarks	61
References	62
<b>4. Uncertainties in global-scale reconstructions of historic land use</b>	<b>67</b>
Abstract	67
4.1 Introduction	67
4.2 Background	68
4.2.1 Historic land use reconstructions	68
4.2.2 Uncertainty analysis	70
4.3 Uncertainties due to context and framing	71
4.4 Uncertainties in input data of population and land use	72
4.5 Uncertainties in model parameters and assumptions	76
4.6 Uncertainties related to model structure	79
4.7 Discussion	81
References	86

<b>5. Applications I: Anthropogenic Transformation of the Biomes, 1700 to 2000</b>	<b>91</b>
5.1 Introduction	91
5.2 Material and Methods	92
5.2.1 Potential natural vegetation – the classic biomes	92
5.2.2 Anthromes	93
5.2.3 Areas of anthromes, ‘used lands’ and ‘unused lands’	96
5.3 Results	96
5.3.1 Global and regional changes in biomes and anthromes, 1700–2000	96
5.3.2 Pathways and dynamics of biome transformation	101
5.3.3 Current state of the anthropogenic biosphere	103
5.4 Discussion	106
5.4.1 Anthromes as descriptors of the biosphere	106
5.4.2 Anthropogenic transformation of the biosphere, 1700–2000	107
5.4.3 Implications of an anthropogenic biosphere	109
References	110
 <b>6. Applications II: Holocene carbon emissions as a result of anthropogenic land cover change</b>	 <b>115</b>
Abstract	115
6.1 Introduction	115
6.2 Material and Methods	118
6.2.1 Anthropogenic land cover change (ALCC)	118
6.2.2 Other driver data for terrestrial carbon cycle modeling	120
6.2.3 Model configuration for ALCC simulations	120
6.3 Results	122
6.3.1 Scenarios of ALCC	122
6.3.2 Geographic distribution of changes in carbon storage	128
6.3.3 Global trends in carbon storage over the Holocene	129
6.4 Discussion	131
6.4.1 Uncertainties and comparisons to other studies	131
6.4.2 The ice core record of Holocene CO <sub>2</sub> and isotope mass balance	
constraints on ALCC emissions	133
6.4.3 Evaluation of the ALCC scenarios	135
6.5 Future perspectives and conclusions	135
References	136
Supplementary material	142

<b>7. Synthesis</b>	<b>149</b>
7.1 Human environment interaction theories	149
7.2 Added value to existing data	153
7.3 Applications	154
7.4 Limitations of land cover reconstructions	155
7.5 Integrated assessments/global change research	157
References	160
<b>Acknowledgements</b>	<b>165</b>
<b>Curriculum vitae</b>	<b>167</b>
