Contents

Acknowledgements	vii
1 Introduction	1
1.1 The economics of cities	1
1.2 The empirical literature	4
1.3 Contribution of this thesis	8
2 The spatial scope of agglomeration economies	15
2.1 Introduction	15
2.2 Methodology	18
2.3 Data description	24
2.4 Results	28
2.5 Sensitivity analyses	36
2.6 The magnitude of the wage-agglomeration relationship	40
2.7 Conclusion	43
3 Why do wages grow faster in urban areas? Sorting of high potentials matters	45
3.1 Introduction	45
3.2 Data description	49
3.3 The urban wage premium and the wage-level equation	54
3.4 The urban wage-growth premium	58
3.5 Spatial sorting on wage-growth determining characteristics	61
3.6 Second-stage estimation issues	65
3.7 Heterogeneous effects	71
3.8 Conclusion	76

4 The scope of the external return to higher education	79
4.1 Introduction	79
4.2 Related literature	82
4.3 Data description	84
4.4 Estimating the external return to higher education across three work environments	89
4.5 Heterogeneous effects and alternative specifications	104
4.6 Conclusion	110
 5 House prices and accessibility: Evidence from a quasi-experiment in transport infrastructure	 111
5.1 Introduction	111
5.2 Quasi-experiment: the Westerscheldetunnel	114
5.3 Methodology and data	119
5.4 Results	129
5.5 Sensitivity analyses	136
5.6 Conclusion	142
 6 Conclusion	 145
6.1 Main findings of this thesis	145
6.2 Policy implications	147
6.3 Future research	150
 Appendices	 153
Appendix A	153
Appendix B	160
Appendix C	162
 Nederlandstalige samenvatting (summary in Dutch)	 171
 Bibliography	 179

List of figures

1.1	Schematic outline of the thesis	10
1.2	The urban geography of the Netherlands	11
2.1	The net effect of two monotone distance decay functions	21
2.2	The expected wage effect of agglomeration	43
3.1	Wage-level and wage-growth effects of urban areas	47
3.2	Two measures of urban scale	54
3.3	Graphical representation of the main results	64
3.4	Non-parametric kernel estimation of the wage-agglomeration relationship	68
4.1	A tricube and exponential kernel function	97
4.2	Graphical representation of the mean squared errors	98
5.1	Map of the province of Zeeland	115
5.2	Percentage change in accessibility due to the opening of the tunnel and abolishment of the ferry services	116
5.3	Traffic counts across the Westerschelde estuary per working day	117
5.4	Distance decay functions	122
5.5	Methodological framework	124
5.6	Average house prices per square meter in euro	128
A.4a	Concentric ring variables measuring domestic employment	157
A.4b	Concentric ring variables measuring foreign employment	158
A.5	Graphical representation of the spatial scope of agglomeration economies	159
A.6	Three measures of agglomeration	159

List of tables

2.1	Summary statistics of the longitudinal wage data	25
2.2	Correlation matrix of the concentric ring variables	27
2.3	The spatial scope of agglomeration economies	29
2.4	Regional heterogeneity in the spatial scope of agglomeration economies (a)	33
2.5	Regional heterogeneity in the spatial scope of agglomeration economies (b)	34
2.6	The influence of foreign agglomeration on domestic wages	35
2.7	Alternative specifications	38
2.8	Industrial heterogeneities	40
2.9	The magnitude of the wage-agglomeration relationship	42
3.1	Summary statistics of the longitudinal wage data	51
3.2	Movers and non-movers between 2006 and 2014	52
3.3	Wage benefits of urban areas	58
3.4	Wage-level and wage-growth benefits of urban areas	63
3.5	FGLS and 2SLS estimates of the second-stage equations	67
3.6	The spatial scope of agglomeration economies	70
3.7	Heterogeneous effects by educational attainment and knowledge intensity	73
3.8	Heterogeneous effects by age groups and gender	74
4.1	Descriptive statistics	88
4.2	First-stage results and the external return to higher education	92
4.3	The spatial scope of the higher education spillover	94
4.4	The spatial and sectoral scope of the higher education spillover	100
4.5	Spatial, sectoral and organizational scope of the higher education spillover	102
4.6	The external return to higher education for firms with differences in size and knowledge intensity	105

4.7	The external return to higher education across education groups	107
4.8	Alternative specifications (a)	108
4.9	Alternative specifications (b)	109
5.1	Descriptive statistics of accessibility	126
5.2	Number of house transactions and transaction prices per year in Zeeland	129
5.3	Effect of accessibility on house prices	130
5.4	Two placebo tests	131
5.5	Effect of accessibility on house prices with regional interaction	132
5.6	Effect of accessibility on house prices with interactions for initial accessibility, education level and postal code fixed effects	135
5.7	Robustness to different cutoff values of the Gaussian distance decay function	137
5.8	Robustness to an inverse distance weighted accessibility measure	138
5.9	Robustness to a tricube weighted accessibility measure	139
5.10	Robustness to detrended house prices	140
5.11	Robustness to different sample periods	142
A.1	Data sources for constructing the concentric ring variables	153
A.2	Concentric ring variables based on population counts	155
A.3	First-stage IV regression results	156
B.1	Heterogeneous effects by educational attainment and knowledge intensity – without wage-growth controls	160
B.2	Heterogeneous effects by age groups and gender – without wage-growth controls	161
C.1	Descriptive statistics of (hedonic) control variables and their effect on house prices	162
C.2	Housing data selection procedure and number of observations	165
C.3	Different minimum number of house transactions per postal code	166
C.4	Effect of accessibility on house prices with anticipation per quarter	167
C.5	Accessibility measure based on population	168
C.6	A finer-grained postal code fixed-effects interaction	169
