# Content

<b>Chapter 1</b>	General introduction, aim and outline of the thesis	7
<b>Chapter 2</b>	Reviews	
	2.1 Clinical correlates of quantitative EEG in Parkinson's disease: A systematic review	23
	2.2 A systematic review of MEG-based studies in Parkinson's disease: The motor system and beyond	53
<b>Chapter 3</b>	Longitudinal MEG studies	
	3.1 Longitudinal consistency of source-space spectral power and functional connectivity using different magnetoencephalography recording systems	93
	3.2 Cortical and subcortical changes in MEG activity reflect Parkinson's progression over a period of 7 years	115
<b>Chapter 4</b>	Changes in resting-state directed connectivity in cortico-subcortical networks correlate with cognitive function in Parkinson's disease	147
<b>Chapter 5</b>	Functional connectivity between resting-state networks reflects decline in executive function in Parkinson's disease: a longitudinal fMRI study	169
<b>Chapter 6</b>	Deep brain stimulation-related studies	
	6.1 Motor effects of deep brain stimulation correlate with increased functional connectivity in Parkinson's disease: An MEG study	197
	6.2 Structural and functional correlates of subthalamic deep brain stimulation-induced apathy in Parkinson's disease	229
	6.3 Magnetoencephalography to measure the effect of contact point-specific deep brain stimulation in Parkinson's disease: a proof of concept study	257
<b>Chapter 7</b>	Summary and general discussion	283
