Chapters

1. Introduction	11
2. Method comparison for <i>N</i>-glycan profiling: Towards the standardization of glycoanalytical technologies for cell line analysis <i>PLoS One. (2019) doi: 10.1371/journal.pone.0223270</i>	35
3. Disruption of sialic acid metabolism drives tumor growth by augmenting CD8⁺ T cell apoptosis <i>Int J Cancer. (2019) doi: 10.1002/ijc.32084</i>	55
4. Tn antigen expression contributes to an immune suppressive microenvironment and drives tumor growth in colorectal cancer <i>Front Oncol. (2020) doi: 10.3389/fonc.2020.01622</i>	85
5. Fucosylated antigens in cancer: an alliance toward tumor progression, metastasis, and resistance to chemotherapy <i>Front Oncol. (2018) doi: 10.3389/fonc.2018.00039</i>	115
6. Transcriptional activation of fucosyltransferase (FUT) genes using the CRISPR-dCas9-VPR technology reveals potent <i>N</i>-glycome alterations in colorectal cancer cells <i>Glycobiology. (2019) doi: 10.1093/glycob/cwy096</i>	141
7. FUT9-driven programming of colon cancer cells towards a stem cell-like state <i>Cancers. (2020) doi: 10.3390/cancers12092580</i>	175
8. FUT9 expression drives <i>in vivo</i> tumor growth and is associated with downregulated IFN signaling and decreased MHC-I expression in colon cancer cells <i>Manuscript in preparation</i>	213
9. Discussion- The past, present and future of glycan-based cancer research	231
10. Appendix Thesis summary List of publications Acknowledgements Curriculum Vitae	245
