Contents

Chapter 1

The flexibility of natural light harvesting.....7

Chapter 2

Design principles of solar light harvesting in plants: functional architecture of the monomeric antenna CP29.....39

Supplementary Information.....63

Chapter 3

Capturing the quenching mechanism of light-harvesting complexes of plants by zooming in on the ensemble.....75

Supplementary Information.....89

Chapter 4

Light-harvesting complexes access analogue emissive states in different environments.....109

Supplementary Information.....129

Chapter 5

Photosynthesis with chlorophyll *f*: trade-off between far-red absorption and light-use efficiency.....151

Supplementary Information.....169

Chapter 6

Breaking the red-limit: efficient trapping of long-wavelength excitations in chlorophyll *f*-containing Photosystem I.....195

Supplementary Information.....215

Chapter 7

Far-red allophycocyanin increases both the absorption cross-section and photochemical efficiency of chlorophyll *f*-containing Photosystem II.....239

Supplementary Information.....255

Summarizing discussion.....265

References.....275

List of publications.....303

Acknowledgments.....305
