Contents

Chapter 1 General introduction

Section 1 Cardiovascular risk factors in rheumatoid arthritis and psoriatic arthritis

Chapter 2 Atherosclerotic cardiovascular disease in patients with chronic inflammatory joint disorders

Chapter 3 Co-existent subclinical hypothyroidism is associated with an increased risk of cardiovascular events in patients with rheumatoid arthritis

Chapter 4 IL-32 promoter SNP rs4786370 predisposes to modified lipoprotein profiles in patients with rheumatoid arthritis

Chapter 5 The effects of 5 year etanercept therapy on cardiovascular risk factors in patients with psoriatic arthritis

Section 2 Magnitude of cardiovascular risk in rheumatoid arthritis and other inflammatory joint disorders

Chapter 6 Cardiovascular Event Risk in Rheumatoid Arthritis is Higher than in Type 2 Diabetes: a 15 Year Longitudinal study

Chapter 7 EULAR recommendations for cardiovascular disease risk management in patients with rheumatoid arthritis and other forms of inflammatory joint disorders: 2015/2016 update

Section 3 Novel Factors associated with Cardiovascular Risk in Rheumatoid Arthritis

Chapter 8 Noncanonical NF- κ B signaling in microvessels of atherosclerotic lesions is associated with inflammatory cell infiltration, atheromatous plaque morphology and myocardial infarction

Chapter 9 Arterial wall inflammation on 18F-FDG-PET/CT is increased in patients with rheumatoid arthritis as compared with osteoarthritis, as a marker of early atherosclerosis

Chapter 10 Arterial wall inflammation in rheumatoid arthritis is reduced by anti-inflammatory treatment

Chapter 11 Interferon regulatory factor 5 (IRF5) gene variants rs2004640 and rs4728142 are associated with carotid intima media thickness but not with cardiovascular events in rheumatoid arthritis

Chapter 12 General Discussion and Summary
