TABLE OF CONTENTS

Chapter 1	General introduction	7
Chapter 2	Routine clinical care data from thirteen cardiac outpatient clinics: Design of the cardiology centers of the Netherlands (CCN) database	17
Chapter 3	Outcomes in patients with a first episode of chest pain undergoing early coronary computed tomographic imaging	35
Chapter 4	Coronary calcification measures predict mortality in symptomatic women and men	53
Chapter 5A	NYHA class is strongly associated with mortality beyond heart failure in symptomatic women	75
Chapter 5B	Sex differences in the relationship between New York Heart Association functional classification and survival in cardiovascular disease patients: A mediation analysis of exercise capacity	81
Chapter 6	Development of a pipeline for adverse drug reactions identification in clinical notes (ADRIN): Word embedding models and string matching	103
Chapter 7	Artificial Intelligence in cardiovascular imaging: State-of-the-art and implications for the imaging cardiologist	129
Chapter 8	Improving the classification of women at high risk of coronary artery disease with logistic regression and gradient boosting using a regular care database	149
Chapter 9	Deep Neural Networks reveal novel sex-specific electrocardiographic features relevant for mortality	185
Chapter 10	General discussion and future perspectives	213
	Summary	
	Samenvatting
