## CONTENTS

1.	General introduction	9
<hr/> <b>PART I: Methodological aspects</b> <hr/>		
2.	Quantitative radiomics features in diffuse large B-cell lymphoma: does segmentation method matter?	25
3.	Comparing lesion and feature selections to predict progression in newly diagnosed DLBCL patients with <sup>18</sup> F-FDG PET/CT radiomics features	55
4.	External validation: A simulation study to compare cross-validation versus holdout or external testing to assess the performance of clinical prediction models using PET data from DLBCL patients	99
<hr/> <b>PART II: Radiomics based prediction models</b> <hr/>		
5.	<sup>18</sup> F-FDG PET baseline radiomics features improve the prediction of treatment outcome in diffuse large B-cell lymphoma	117
6.	Baseline PET radiomics outperform the IPI risk score for prediction of outcome in diffuse large B-cell lymphoma	145
7.	Baseline radiomics features and <i>MYC</i> rearrangement status predict progression in aggressive B-cell lymphoma	165
<hr/> <b>PART III: Treatment response monitoring</b> <hr/>		
8.	Optimal timing and criteria of interim-PET in DLBCL: a comparative study of 1692 patients	197
9.	Cost-effectiveness of shortening treatment duration based on interim PET outcome in patients with diffuse large B-cell lymphoma	225
10.	Aberrant patterns of PET response during treatment for DLBCL patients with <i>MYC</i> gene rearrangements	253
11.	Discussion and future perspectives	275
<hr/> <b>PART IV: Addendum</b> <hr/>
