# Contents

<b>Chapter 1</b>	General Introduction and outline of the thesis	9
<b>Chapter 2</b>	Glutamate reduces experimental intestinal hyper-permeability and facilitates glutamine support of gut integrity	41
<b>Chapter 3</b>	Accurate perioperative flow measurement of the portal vein, hepatic artery and renal vein: a role for preoperative MRI?	53
<b>Chapter 4</b>	Enteral administration of alanyl-[2-15N]glutamine contributes more to the de novo synthesis of arginine than intravenous infusion of the dipeptide in humans	73
<b>Chapter 5</b>	Intravenous glutamine supplementation enhances renal de novo arginine synthesis in humans; a stable isotope study	101
<b>Chapter 6</b>	Enteral glutamine administration in critically ill non-septic patients does not trigger arginine synthesis	121
<b>Chapter 7</b>	Enteral glutamine supplementation in optimally fed critically ill patients does not affect protein metabolism	149
<b>Chapter 8</b>	Imbalance of arginine and asymmetric dimethylarginine is associated with markers of circulatory failure, organ failure and mortality in shock patients	169
<b>Chapter 9</b>	Taurine concentrations decrease in critically ill patients with shock given enteral nutrition	189
<b>Chapter 10</b>	Published letters, briefly introduced	211
<b>Chapter 11</b>	Summary of the main results, conclusions and future perspectives	233
<b>Chapter 12</b>	Dutch summary - Nederlandse samenvatting	245
	Dankwoord	251
	Curriculum Vitae	257
	Publications and Awards	263
