Contents

1	Introduction	1
1.1	Characterizing spatio-temporal proximity	2
1.1.1	The spatial dimension	3
1.1.2	The temporal dimension	4
1.2	Sensing modalities	4
1.2.1	Tracking absolute location	4
1.2.2	Tracking relative location	5
1.3	Proposed approach	6
1.3.1	Crowds, crowd behavior, and crowd textures	6
1.3.2	Problem statement	8
1.4	Outline and contributions	9
2	On current crowd management practices and the need for increased situation awareness, prediction, and intervention	11
2.1	Introduction	11
2.2	Background	13
2.3	Methodology	14
2.3.1	Participants	16
2.3.2	Interview process	16
2.3.3	Data analysis	17
2.4	Findings	18
2.4.1	Overview: on the definition of crowd management	19
2.4.2	Current practices	19
2.4.3	Limitations of current practices and crowd managers' requirements for the future	28
2.5	Recommendations	31
2.5.1	Crowd management as two feedback control loops	32
2.5.2	Implications	36
2.6	Discussion	37
2.7	Conclusions	39

3	Crowd textures as proximity graphs	41
3.1	Introduction	41
3.2	Crowds and crowd dynamics	43
3.3	The proximity graph	44
3.3.1	Analyzing the proximity graphs	45
3.3.2	The awareness of the context	46
3.4	An instrument	48
3.4.1	Sensing technologies	49
3.4.2	System architecture	50
3.4.3	A processing chain	51
3.5	Real-world experiment	52
3.6	Discussion	54
3.7	Conclusions	57
4	From proximity sensing to spatio-temporal social graphs	59
4.1	Introduction	59
4.2	Model	62
4.2.1	Problem definition	62
4.2.2	Density-based clustering	64
4.2.3	K-nearest neighbors analysis	65
4.2.4	Proposed solution	66
4.3	Evaluation in simulation	66
4.3.1	Methodology	66
4.3.2	Setups	69
4.3.3	Results	70
4.4	Evaluation in the real world	75
4.4.1	Methodology	76
4.4.2	Evaluation against ground truth data	76
4.4.3	Evaluation at an ICT conference	77
4.5	Discussion	79
4.6	Related work	80
4.7	Conclusions	81
5	Leveraging proximity sensing to mine the behavior of museum visitors	83
5.1	Introduction	83
5.1.1	Motivation	85
5.2	Overview	87
5.2.1	Data-collection architecture	87
5.2.2	Data-filtering pipeline	88

5.2.3	Data-analytics applications	89
5.3	Related work	89
5.4	Model	91
5.4.1	Problem definition	92
5.4.2	Particle filter	92
5.4.3	Density-based filter	95
5.4.4	Majority-voting filter	96
5.5	Evaluation	96
5.5.1	Methodology	96
5.5.2	Results	100
5.6	Visualizing visitor behavior	102
5.6.1	Artworks and rooms popularity	102
5.6.2	Visitors common movement paths	103
5.6.3	Common positions of visitors	106
5.6.4	Artworks attraction and exhibition design	107
5.6.5	Focus group on visualizations' effectiveness	108
5.7	Clustering visitor behavior	110
5.7.1	Time distribution across exhibits	111
5.7.2	Clustering of paths	112
5.8	Predicting visitor behavior	113
5.9	Discussion	117
5.10	Conclusions	118

6 Exploiting density to track human behavior in crowded environments 119

6.1	Introduction	119
6.2	Overview	120
6.2.1	Museum	120
6.2.2	Sensing infrastructure	122
6.2.3	Data analysis	124
6.3	Related work	124
6.4	Model	126
6.4.1	Problem definition	127
6.4.2	Particle filter	128
6.4.3	Smoothing	131
6.5	Evaluation	132
6.5.1	Methodology	132
6.5.2	Results	134
6.6	Application	138
6.6.1	PoIs "popularity" over-time	138
6.6.2	Crowd distribution across floors	139

6.6.3	Flows between floors	139
6.7	Discussion	140
6.8	Conclusions	141
7	How was it? Exploiting smart phone sensing to measure implicit audience responses to live performances	143
7.1	Introduction	143
7.2	Related work	145
7.3	Case study 1: direct responses to a performance	147
7.3.1	Data collection	147
7.3.2	Feature extraction	149
7.3.3	Data analysis	150
7.3.4	Classifying experience	151
7.3.5	Further analysis of salient moments	155
7.3.6	Identifying sitting neighbors	157
7.4	Case study 2: impact of a performance on social behavior	158
7.4.1	Setup	160
7.4.2	Results	160
7.5	Discussion	163
7.6	Conclusions	164
8	Conclusions	165
8.1	Summary of contributions	166
8.2	Limitations and future research	167
	Bibliography	171
