# Table of Contents

Chapter 1. General introduction 9

Chapter 2. Review: Hypoxic signaling during tissue repair and regenerative medicine 25

Chapter 3. HIF-2α expression regulates sprout formation into 3D fibrin matrices in prolonged hypoxia in human microvascular endothelial cells 53

Chapter 4. Identification of HIF-2α–regulated genes that play a role in human microvascular endothelial sprouting during prolonged hypoxia *in vitro* 85

Chapter 5. HIF-2α regulates hypoxia-induced strengthening of the human endothelial barrier by stabilizing adherens junctions 115

Chapter 6. Mitochondrial content and function are decreased by prolonged hypoxia, but are dispensable for endothelial sprouting 143

Chapter 7. Discussion and future perspectives 163

Summary 181

*Nederlandse samenvatting* 187

*Dankwoord* 193
