Acknowledgements

My name is on the title page of this thesis, but in reality it was produced by the work of many. I am thankful to everyone who has supported and inspired me on my academic journey. It is a journey that began with a compelling research idea by Bert Boekschoten, who suggested that I (and my partner in crime, Remy van Baal) take a dive in the warm subtropical sea of the Late Maastrichtian. My childhood dream of becoming a paleontologist was thereby reawakened. It is now 8 years later, and many knowledgeable educators and researchers have generously shared their expertise with me.

I learned much from the fruitful cooperation and discussions with Gareth Davies, Laura Font, John Jagt, Dafne Koutamanis, Jason Laffoon, and John de Vos. Remy van Baal was the best collaborator I could wish for. Jose Joordens laid the groundwork for the research in the second part of this thesis, and I have benefited tremendously from her expert understanding and advice. I also greatly appreciate my collaboration with Jeroen van der Lubbe, always brimming with innovative ideas and sharp insight. And of course the completion of this thesis would not have been possible without my promotor John Reijmer, whose door was always open to me.

BP is acknowledged for their use of the facilities of the stable isotope laboratory at the VU University Amsterdam in support of the BP research project "Understanding the Pre-Salt Carbonates: Analogues of Lacustrine Environments (UPSCALE)". By doing so they supported my part-time job, which enabled me to work on my thesis in the other part of my time.

I feel privileged to have been able to visit and sample the collections of a great number of natural history museums, and would like to thank all the curators and collection managers who unlocked these extraordinary places of treasure for me. However, the samples that I took would not have been of much use without the training and technical assistance I received in the various labs which facilitated my research. For this I sincerely thank Roel van Elsas, Martine Hagen, Saskia Kars, Wynanda Koot, Bouk Lacet, Onno Postma, Richard Smeets, Mathijs van de Ven, John Visser, Bas van der Wagt. Suzan Verdegaal is the terrific head technician of the FALW Stable Isotope lab where I did most of my analyses, but I was also fortunate to share a room with her and Remy, making my days working at the VU very cheerful and enjoyable indeed.

I am particularly grateful for the dedicated guidance provided by my supervisors in these years; Simon Troelstra, Anne Schulp, and Hubert Vonhof. In a very real sense they taught me how to think and how to write, and they provided the ultimate inspiration to write this thesis.

Alongside my research on Quaternary Indonesian fossils, which features so prominently in this thesis, collaboration with Anne allowed me to continue working with much older (and rather more terrifying) creatures as well. I'm very happy that I continue to find myself in this real-life Jurassic Park. I could and would not have completed this thesis without Hubert's continuous effort, support and encouragement. Our discussions never failed to lead me to new insights and enthusiasm. Thank you.

About the author

Renée Janssen studied geology at the VU University in Amsterdam, specializing in paleontology and isotope geochemistry in her Master's programme and taking extracurricular courses in science writing. This PhD thesis spans research done over a period of 8 years, partially performed during her studies and while working as a researcher on several industry-commissioned projects and as technical laboratory assistant.

Education and professional experience

Feb 2015 - Nov 2016	Continuing research on Quaternary Indonesian faunas, as well as working on other projects (mainly focussed on Mesozoic vertebrates).
Feb 2014 – Sep 2015	Technical assistant Stable Isotope Laboratory, Faculty of Earth and Life Sciences, VU University Amsterdam
Aug 2014 – Jan 2015	Researcher on project “Type carbon isotope curves for the UK pre-Westphalian Carboniferous (Courceyan to Yeadonian)” commissioned by Nexen Petroleum U.K. Limited
Feb 2014 – Jul 2014	Researcher on project “Determining spatial controls of lacustrine ‘microbial’ carbonate facies; a combined experimental and outcrop analog approach” commissioned by BP plc
2009-2011	Master in Geosciences of Basins and Lithosphere, VU University Amsterdam
2006-2009	Bachelor in Earth Sciences, VU University Amsterdam
2000-2006	Pre-university secondary education (VWO), Stedelijk Dalton College Alkmaar
