## **Appendix**

## Search strategy systematic reviews (chapters 2 and 7)

The following databases were searched by RvL and JCFK for relevant studies from inception to January 1<sup>st</sup> 2011: PubMed, Embase, Wiley/Cochrane Library, EBSCO/Cinahl and CSA/PsycInfo. For this literature search the following terms were used (with synonyms and closely related words) as thesaurus terms and free text words: “acute lymphoblastic leukemia” and “quality of life” and “child” or “adolescent” or “survivors”. These searches were not limited by study design or language of publication.

### PubMed search strategy (January 1, 2011)

As briefly described in the Methods-sections (Chapter 2 and 7) we constructed a comprehensive search using both thesaurus terms and similar freetext words for the components of the research question.

These components are:

1. acute lymphocytic leukemia
2. quality of life
3. child or adolescent or survivors

These components are combined with AND to comprise the end result.

Labels used:

[ti] = words in article title

[tiab] = words in article title or abstract

[tw] = words in article title, abstract or thesaurus terms

[journal] = journal title

[MeSH] = Medical Subject Headings (thesaurus of Medline)
