My sincere thanks go to the many people who have helped me in many ways during this PhD. Each at the time was invaluable, and I realize that I cannot name everyone. To start, I want to thank the patients who participated in this study: I could not have done it without you. Also I want express my thanks to the professionals that were involved in the treatment in the Reade rehabilitation centre in Amsterdam in any way: the members of team back team, the rehabilitation physicians, my colleagues at the Clinimetric Laboratory, the secretaries of the rehabilitation department, and the members of the planning department: my sincere thanks to each of you.

In addition to clinicians and patients, invaluable contributions were made by the researchers supporting this thesis. Prof. dr. G.J. Lankhorst oversaw the project as my promotor. Dear Guus, I thank you for the ways in which you showed you had faith in my capabilities and for sharing your knowledge and fast experience with me. Dr. A.T. Lettinga was my co-promotor. We met long before this project started. Dear Ant, nineteen years ago I was one of your students, and I have since enjoyed working with you for your creativity and your strong analytical views. Many thanks for all the ways in which you have supported me: from mailing research papers to cooking dinners. My history with dr. L.D. Roorda, my other co-promotor, is somewhat shorter, however his contribution was as essential for the success of this study. Dear Leo, I find your ability combine a thorough way of organizing things with having an eye for the person remarkable. With you on my side problems got a different perspective. Thank you very much Leo. Dr. J.A. Vollebregt was the coordinator of the back team for most of the time this project was running. Dear Joke, it was a pleasure to work with you on this project. Your enthusiasm and practical skills were invaluable: from recruiting patients to the lay-out of this thesis, you were always prepared to put in extra miles. My sincere thanks go to you. I would also like to thank drs. J.H.M. Dekker who was the head of the department of
rehabilitation at the time we initiated this study. Dear Jos, I have much enjoyed working with you for your ability to see opportunities and to think through the implications for daily care. You were one of the few people who immediately understood the role of theory for clinical practice. It is a privilege to have you on my side as a paranimf.

Some people do not match with the label ‘clinically involved’ or ‘researcher’. I would like to say thanks to some people that are special to me in many ways. One of them is dr. C.D. Schröder. Dear Carin, thank you for being a special friend, a co-author, partner-in-research, diner mate, and person to talk about anything. It is a privilege to have you on my side as a paranimf. José de Vries was my research assistant throughout this project. Dear José, you are not a person of many words, and you don’t like to be in the centre of the attention. However, I want to thank you for your invaluable contribution to this project. You are the perfect planner, you have kept so many patients involved in this study by your quiet and friendly approach, and you have kept control over all the lose ends of the study. Many thanks! A third person to thank is drs. R. Dahmen, we share many professional interests and our PhD work developed in more or less the same pace. Dear Rutger, it is great to have you around and to share the ups and downs of doing research and to reflect on the human species.

Two people should have been here to see the end result, but passed away. One is prof. dr. L. Goeken, who supported the ideas for this theory-driven study right from the start, he has helped this project to a good start. The other person is Bert Hoexum, his official job description was father in law. He took a keen interest in
the factory called science and I learned a lot from his experience in his factory called HIAB. I miss him dearly.

Most is said and done. What is left is a sincere thank you to my family. Hans, Leny en Bea dank jullie wel dat jullie er altijd voor me zijn, dat is een groot geschenk en een groot goed. Lieve Pieter, Dorien en Ida, woorden zijn niet toereikend om te omschrijven wat jullie tijdens dit promotietraject voor me betekend hebben. Toch doe ik een goo: jullie waren het begin, het einde, het perspectief en het contrast en alles daar tussen in... Mijn bakens. Dank jullie wel.
About the author
Petra Cecilia Siemonsma was born in 1967 in Leeuwarden in the Netherlands. She completed high school in Meppel. She graduated from physical therapy in Enschede in 1989 and worked as a physiotherapist in Germany. From 1991 until 1994 she studied human movement science at the RijksUniversiteit Groningen. The subject of her master thesis was a comparative analysis of two stroke rehabilitation methods. She taught philosophy of science and ethics at the Academie voor Fysiotherapy in Groningen in 1994 and 1995.

She was a research fellow (Stoke Association bursary) from 1996-1997 at the stroke research unit in Nottingham in the United Kingdom, and a senior research physiotherapist at the University Medical Centre Utrecht from 1997-1999. From 1999–2010 she was a research coordinator and head of the Clinimetric Laboratory in the Reade Centre for Rehabilitation and Rheumatology (formerly Jan van Breemen Institute) in Amsterdam. In 2002 she was awarded funding from ZonMw and started the research which resulted in the thesis. In 2005 she finished her training as a researcher in rehabilitation medicine (VRA-SGO wetenschappelijke opleiding voor revalidatieartsen).

Petra Siemonsma is currently working at TNO in Leiden where she is researcher and project manager of several studies involving care and care-related prevention in elderly and chronically ill people.
