Contents

Chapter 1          page 9
General introduction.

Chapter 2          page 21
Three-dimensional echocardiography for left ventricular quantification: fundamental validation and clinical applications.
Neth Heart J. 2011 Oct;19(10):432-31

Chapter 3          page 41
Importance of transducer displacement and tilting on three-dimensional echocardiographic volume assessment using apical or off-axis rotational acquisition: an in vitro study.

Chapter 4          page 59
Quantification of left ventricular volumes and ejection fraction using freehand transthoracic three-dimensional echocardiography: comparison with magnetic resonance imaging.

Chapter 5          page 81
Early identification of left ventricular remodelling after myocardial infarction, assessed by transthoracic 3D echocardiography.

Chapter 6          page 99
Noninvasive mapping of left ventricular electromechanical asynchrony by three-dimensional echocardiography and semi-automatic contour detection.
Am J Cardiol 2004 Dec 1;94(11):1449-53.

Chapter 7          page 113
Contrast-enhanced versus non-enhanced three-dimensional echocardiography of left ventricular volumes.
Neth Heart J 2008 Feb;16(2):47-52.

Chapter 8          page 131
Comparison of regional quantitative indices of left ventricular dyssynchrony by three-dimensional echocardiography and semi-automated border detection prior to and during acute biventricular pacing.
Submitted for publication
Chapter 9

A new quantification method for mechanical dyssynchrony with three-dimensional echocardiography; segmental time and volume loss for prediction of response to cardiac resynchronisation therapy.

Chapter 10

Summary and future perspectives
