CONTENTS

Chapter 1: Biology of circulating tumor microvesicles: an overview.........................8

Chapter 2: Tumor microvesicles contain retrotransposons and amplified oncogene sequences...............................................................26

Chapter 3: Microvesicle-associated AAV vector as a novel gene delivery system............................................................43

Chapter 4: Detection of human MYC and EGFR amplifications in circulating microvesicles from mouse models.................................66

Chapter 5: Glioma exosomes carry tumor protein biomarkers...............................79

Chapter 6: RNA expression patterns in serum microvesicles from patients with Glioblastoma multiforme and controls................................95

Chapter 7: BEAMing qRT-PCR analysis of mutant IDH1 mRNA in tumor MVs.............................................................115

Chapter 8: Blood platelets contain tumor-derived RNA biomarkers......................129

Chapter 9: Impact of biofluid viscosity on size and sedimentation efficiency of the isolated microvesicles........................................139

Chapter 10: Discussion and future directions....................................................150

Chapter 11: Summary/Nederlandse samenvatting..............................................161
