Acknowledgments

The most difficult task of my PhD was when my supervisor asked me to change the pronouns in this work from “we” to “I.” This life-changing experience would *not* have been possible without a huge support network. Consequently, the second most difficult task of my PhD is writing this acknowledgment section. Explicitly or implicitly, I am amazingly grateful.

I start by thanking all of my coauthors. Peter Dekker, your statistical support was vital for helping me unlock the story of my data. Thank you for being my personal locksmith. Next, Max Krüger, what can I say? You flew to the other side of the world to collect data! You made it back from Indonesia in one piece (with some interesting stories), did a great job, and brought back wonderful results. The third coauthor I would like to thank is Astrid Homan. I learned so much working with you. As I advance in my own career, you will remain a template. Though not appearing in this dissertation, I would also like to acknowledge my publication with Alexei Sharpanskykh. Thank you for showing me the beauty of agent-based modeling. This brings me to Allen Grabo. Allen, over time you went from being a master student I had to supervise to a great friend. We have one publication together, the next is hopefully on the way, and more to come! I will enjoy watching you develop as an academic.

To all those that have graciously reviewed my papers prior to submission, my sincerest gratitude. To Father Pete and Judith Geldard, words cannot describe the importance of your support during my humble beginnings in England. To Sandy and Rick Rokita, thank you for your support when I’m home. To the Blaker Family, thank you for your support when I’m in the Pays-Bas. To my dear friends from the English years (Gabriele, Tiina, Roger, and Sari just to name a few), that chapter of my life will always remain special. To my officemates, Marco van Bommel

and Marleen Redeker, thank you for being so kind to me even when I was hating the world. I would also like to thank the entire Social and Organizational Psychology Department at the VU.

I thank my reading and defense committee: Professor Kees Cools, Professor Paul Jansen, Professor Jan Theeuwes, Professor Abraham Buunk, Dr. Reinout de Vries, Dr. Martijn Meeter, and Dr. Mark Dechesne.

This brings me to my paranimfs, Dan Balliet and Omar Solinger. Dan, I may never go heli-skiing with you, but we will definitely do some extreme research. You have been a wonderful source of ideas. Remember me when you're a world famous extreme skiing/climbing/scientist! As for Omar Solinger, we are on the verge of becoming a formidable academic force. Your temporal insistence has challenged me to think more dynamically and has only strengthened my work. You have also opened doors for me professionally. On top of all this, you are simply a wonderful friend. I'm honored to be your colleague.

My dearest Nancy, you're a special mix of grace, intelligence, and humor, and you have kept me sane with limitless patience. Your virtuous nature helps me to keep my faith in humanity and your firecracker spirit kicks me in the butt when I think about losing it. We can talk about statistics and research, make social commentary, or thoroughly enjoy ourselves with stupid television. You help me swim through bureaucracy and make sense of a foreign land. What would I do and who would I be without you? I can't acknowledge you enough, but will never stop trying.

To my guru, Mark van Vugt. You have changed my life... I could go on at length about the wonderful research we have done or how this all started with you graciously answering the email of some random person tucked away in Western Pennsylvania. I could also discuss how

you've challenged me to be a better writer and thinker. This, however, distracts from the fundamental point, and so I repeat... You have changed my life. For that I am ever grateful.

Finally, to my parents, Bob and Tammy. You have given me so much. I honestly don't know where to begin. It's like trying to describe the whole of humanity in one word. So, if I have to, the one word I'll use to describe both my hope for humanity and my appreciation of you is "love." It's not always pretty and occasionally frustrating, but at the core it's unfailing and strong. Thank you "Taminia" and "Robania" for all that you have given me.
