Acknowledgements

It's a long journey getting to the end of a PhD and I'd like to thank everyone who has been a part of that journey, be it as a friend, a colleague or whatever other role.

To all the school teachers and coffee drinkers who volunteered to participate in the project; without you I'd have nothing to write about! Thanks for your enthusiasm and interest in the project, and the time you volunteered. Thanks also to everyone who helped to ensure that information about our study reached as many potential volunteers as possible.

To my supervisors, Jelle, Dick, Lisbeth and Renate, I don't even know where to start. Just thanks for everything! In your own way, you've all contributed to my development as a researcher and as a person, and I'm sincerely grateful for what each of you has taught me.

There are many others who contributed their time and expertise to the project. Peter, Jan, Walter, Serge, Eric, Ton, Enno, Anita, Nancy, Martin, Nico, Ron and Astrid, thanks! Your invaluable input is much appreciated and it was a pleasure working with you.

A project like this would be virtually impossible without the help of research assistants. Thanks Carlijn, Maureen, Eva, Funs, Lieke and Karolina for your help with data collection and from saving me from facing the tedious task of data entry and processing alone.

Thanks to everyone in the Cognitive Neuropsychiatry and Clinical Neuroscience group at Maastricht University and to everyone at the Centre of Brain and Learning at the VU University. To all the other PhD students with whom I've shared the ups and downs of this experience over the years, thanks for your support and friendship.

To all my family and friends, thanks for reminding me of the important things in life, for your interest in the project, for the many various ways you've helped me over the last few years and for being there with a sympathetic ear or words of encouragement when needed. An extra thanks to Mum, Matt and Brooke, for your contributions as my consulting school teachers.

Thanks also to those who inspired me to pursue a career in research in the first place; Geoff, Allison, Val and Celia.

And finally, thanks to my lieve Alex!

Curriculum vitae

Elissa Klaassen was born July 1981 in Perth, Western Australia. She graduated from Bridgetown (junior) High School in 1996 and from Narrogin Senior High School in 1998. Elissa went on to complete a Bachelor of Science specialising in Neuroscience with a second major in Pharmacology at the University of Western Australia in 2001, including a research scholarship in the Neuroscience Department at the Australian National University. From 2002 to 2004 she continued her studies at the University of Western Australia, completing a second Bachelor of Science with a double major in Psychology and an additional Honours year, from which she graduated first class. In 2005 Elissa began the Research Master's specialising in Neuropsychology at Maastricht University and graduated cum laude in 2007. During the Research Master's program she completed a research internship in the Clinical Psychopharmacology Unit at the University College London, and a clinical internship at The Margarete Centre, South Camden Drug Services and Islington Specialist Alcohol Treatment Service. She then began her PhD in the Department of Psychiatry and Neuropsychology at Maastricht University and completed the present PhD dissertation in the Educational Neuroscience Department, Faculty of Psychology and Pedagogy at the VU University Amsterdam.
