## CONTENTS

1  General introduction  

**Part I**  
2  **Overweight related energy balance-related behaviors**  
   Mediators of longitudinal changes in measures of adiposity in teenagers using parallel process latent growth modeling  

**Part II**  
3  **Digging deep, thinking hard on effects of school-based interventions targeting energy balance-related behaviors**  
   For whom and under what circumstances do school-based interventions aimed at energy balance behavior work? Systematic review on moderators  
4  What works in school-based energy balance behavior interventions and what does not? A systematic review of mediating mechanisms  

**Part III**  
5  **Measurement issues of physical activity and sedentary behavior**  
   Study protocol of physical activity and sedentary behavior measurement among school-children by accelerometry – Cross-sectional survey as part of the ENERGY project  
6  Comparing different accelerometer cut-points for sedentary time in children  

**Part IV**  
7  **Environmental and social determinants of energy balance-related behaviors**  
   Comparison of energy balance-related behaviors and measures of body composition between Turkish adolescents in Turkey and Turkish immigrant adolescents in the Netherlands  
8  Daily variations in weather and the relationship with physical activity and sedentary time in European 10-12yr olds: the ENERGY-project  
9  Mid-intervention mediating effects on children’s physical activity in the Transform-Us! cluster-randomized controlled trial  
10 General discussion  

Summary/Samenvatting/Özet
