CONTENTS

Chapter 1	11
General introduction and outline of the thesis.	
Chapter 2	25
Comparison of exercise electrocardiography with magnetic resonance myocardial perfusion imaging and computed tomography coronary angiography in patients with suspected coronary artery disease.	
Chapter 3	41
Positive predictive value of computed tomography coronary angiography in clinical practice.	
Chapter 4	55
Low to intermediate probability coronary artery disease: comparison of computed tomography coronary angiography with first pass myocardial perfusion magnetic resonance imaging.	
Chapter 5	71
Combined non-invasive functional and anatomical diagnostic work-up in clinical practice: the magnetic resonance and computed tomography in suspected coronary artery disease (MARCC) study.	
Chapter 6	93
Clinical outcome of patients with suspected coronary artery disease after evaluation with computed tomography coronary angiography and magnetic resonance myocardial perfusion imaging.	
Chapter 7	113
Comparison of dual to single contrast bolus magnetic resonance myocardial perfusion imaging for detection of significant coronary artery disease.	
Chapter 8	129
General considerations and future perspectives.	

Addendum 1	143
Addendum 2	149
Addendum 3	153
Summary	157
Samenvatting	163
