CONTENTS

Chapter 1	General introduction	7
Chapter 2	Colonoscopy-controlled intra-individual comparisons to screen relevant neoplasia: faecal immunochemical test vs. guaiac-based faecal occult blood test	17
Chapter 3	Higher Faecal Immunochemical Test cut-off levels: lower positivity rates but still acceptable detection rates for early-stage colorectal cancers	33
Chapter 4	Double sampling of a faecal immunochemical test is not superior to single sampling for detection of colorectal neoplasia: a colonoscopy controlled prospective cohort study	53
Chapter 5	Hemorrhoids detected at colonoscopy: an infrequent cause of false-positive fecal immunochemical test results	73
Chapter 6	Fecal Immunochemical Tests: sex specific cut-off values for equal sensitivity for colorectal cancer?	91
Chapter 7	DNA methylation of phosphatase and actin regulator 3 detects colorectal cancer in stool and complements FIT	107
Chapter 8	Summary, general discussion and future perspectives	145
	Samenvatting (Summary in Dutch)	153
	Dankwoord (Acknowledgements)	159
	About the author	165
