The development of this doctoral thesis greatly benefited from numerous persons that provided me with advice, valuable thoughts, critical questions and precious insights. I am deeply grateful for their support.

First, I want to thank my supervisors Sven Voelpel and Astrid Homan for supporting me in so many ways. Sven, thank you for your confidence and trust in my work. You provided me with the autonomy I needed to develop my own research interests, you were always open for my ideas and plans, and helped me realize them. You provided me with an instructive, encouraging, and inspiring work climate. Besides connecting me with a large network of scholars and companies, you also gave valuable advice on all aspects of academic work. It was a pleasure working with you during the last years, and I am highly thankful for all the opportunities to grow and learn that you provided. Astrid, thank you for your continuous support and enormous encouragement, and for being a role model for me. I was always impressed by how fast and patiently you answered to all my questions, and how much time and effort you devoted to provide me with valuable feedback and ideas that really helped me improve my work, no matter how scarce your time was. I could not have wished for better support, and I am deeply grateful for this. I would also like to thank Adalbert Wilhelm. You were part of my PhD committee early on, and your valuable help was highly beneficial for this dissertation. You immensely supported my and my colleague’s efforts to conduct a large data collection on campus, and you were always open for my ideas and plans. Besides stimulating my interest in structural equation modeling, you also took the time to set up meetings with me for reviewing my work. Moreover, thanks to you, I realized that writing the dissertation thesis is also a possibility to delineate my own view of my research field. I would also like to thank Ronald Piccolo whom I had the chance to visit at Rollins College, Orlando, and who luckily also became a member of my PhD committee. Ron, right from the beginning of my PhD, I was amazed by your research which inspired me to follow your path as a leadership researcher. You deepened my understanding about leadership phenomena and research in so many ways. Thank you for devoting so much of your time, thoughts, and ideas to our projects, for reviewing my work, and for your invaluable support with respect to my efforts to network and publish. You also showed me that being a great scholar, a great teacher, and a great family person at the same time is possible. I also thank Mark van Vugt, who promotes my dissertation at the Vrije Universiteit Amsterdam. The discussions we had on leadership and its evolutionary origins, the role of leader demographics,
and the intersection of leadership and neurobiology were deeply inspiring, and I hope I will have the chance to have more discussions with you in the future. You took the time for personal meetings and for reviewing my dissertation, and provided me with very valuable advice and new insights. You also invited me to spend some time at your department which makes me really feel part of the VU Amsterdam. I am highly grateful for your support, time, and effort.

I also thank Eric Kearney and Torsten Biemann. Eric, you helped me find my “niche” in the realm of leadership and diversity, and develop my own research ideas. You supported (and keep supporting) me in innumerable ways. Torsten, you provided me with an understanding of the methodological possibilities and pitfalls of team/multilevel research and gave me practical advice on data-analytical questions. Working with you, Eric and Torsten, was and is incredibly helpful. Furthermore, I would like to thank Daan van Knippenberg and Wendy van Ginkel-van Knippenberg. Daan, you helped me gain a deepened understanding of team diversity and the complexities of this phenomenon, and inspired me to investigate team diversity. Wendy, you gave me crucial insights into the concept of shared task representations, and you supported me throughout our collaboration. Both of you provided me with highly valuable feedback on my work, and I am very grateful for this. Also, I thank the Jacobs Center of Lifelong Learning and Institutional Development, especially Ursula Staudinger, for the support in the beginning of my PhD, and the important insights with respect to the many facets of human aging.

I am grateful to all my former and current colleagues and friends of the WISE research group, the DFG-project team, and the School of Humanities and Social Sciences. Diana Boer willingly shared her amazing knowledge of research, methods, and publishing with me. Diana, thank you for your support and very helpful feedback on my dissertation project. Robert and Stefan, we became friends right from the start of my PhD, and I would like to thank you for this. Robert, together we managed a seemingly impossible experimental study, and I still remember this time as one of exceptional work, but also exceptional learning and amazing team spirit. Katharina, it was great sharing my office with you during our joint PhD time in Bremen. I would also like to thank my highly appreciated former colleagues at Mars Chocolate in Viersen for our valuable collaboration. You greatly supported me and made my time at Mars not only very productive, but also very enjoyable. I also thank the companies, employees, and students that willingly participated in my data collection endeavors.

Special thanks go to my family, friends, and befriended neighbors. Without your help, love and support, this work would not have been possible. Thanks to my parents, Rita and Hermann, and the rest of my family for supporting me in my plans and for always being there
when needed. Thank you, Sabrina, for understanding very well the peculiarities of being a doctoral student, and for taking the time to provide me with valuable comments on my project.

My very special thanks go to Niels, my beloved husband, who never let me get too absorbed by my research. He was and is always there for me, cares for me, endured my ups and downs during the dissertation project, and immensely enriches my life.

Claudia

Bremen and Amsterdam, February and May 2013
