Acknowledgements

I would like to thank Ronald Meester for the trust he invested in me when he hired me four years ago. Ronald, I could always count on your good advice.

My sincere thanks go to Wouter Kager who had the intuition that the Kac–Ward approach to the Ising model is worth reinvestigating. Wouter, you were right. It has been a fascinating subject to explore and I enjoyed discussing various related problems with you.

I would like to thank Federico Camia whose NWO Vidi grant 639.032.916 funded my research. Federico, I could always drop by your office and a small question often turned into hours of discussion on mathematics and physics. It was always a pleasure and I learned a lot from you.

I would also like to thank Ronald, Wouter, and Federico for their help in numerous situations and invaluable comments on my work.

My thanks also go to Rob van den Berg who in 2011 organised a reading group on the article [54], where I learned about the discrete holomorphic approach to the Ising model.

I am grateful to the reading committee of my thesis: Rob van den Berg, Hugo Duminil-Copin, Roberto Fernández, Alberto Gandolfi and Pierre Nolin for their involvement in the process of my PhD defense.

Obviously, I would like to express my gratitude to my colleagues at the VU and my friends for their help and for making these four years very enjoyable. Special thanks go to Maarten who translated the summary of this thesis.

Finally, I would like to thank my parents for their constant support.

Marcin Lis
