CONTENTS

Chapter 1	General Introduction	7
Chapter 2	Optical coherence tomography: reliability and influencing factors	17
	2.1 The physiological variation of the retinal nerve fiber layer thickness and macular volume in humans as assessed by spectral domain-optical coherence tomography	19
	2.2 Retinal hyperaemia related blood vessel artifacts are relevant to automated OCT layer segmentation	35
	2.3 Physiological variation of retinal layer thickness is not caused by hydration: a randomised trial	49
Chapter 3	OSCAR-IB criteria	61
	3.1 A simple sign for recognizing off-axis OCT measurement beam placement in the context of multicenter studies	63
	3.2 The OSCAR-IB consensus criteria for retinal OCT quality assessment	81
	3.3 Quality control for retinal OCT in Multiple Sclerosis: Validation of the OSCAR-IB criteria	95
Chapter 4	Optical coherence tomography in MS	109
	4.1 Disease course heterogeneity and OCT in Multiple Sclerosis	111
	4.2 A dam for retrograde axonal degeneration in Multiple Sclerosis?	127
	4.3 Bidirectional trans-synaptic axonal degeneration in the visual pathway in Multiple Sclerosis	145
Chapter 5	Summarising discussion and conclusions	163
Appendix	Nederlandse Samenvatting	183
	List of publications	189
	Author affiliations	193
	Biography	197
	Dankwoord	199
