Contents

Chapter 1	General introduction and thesis outline	9
Chapter 2	Familial hypertrophic cardiomyopathy: functional effects of myosin mutation R723G in cardiomyocytes	25
Chapter 3	Mutations in <i>MYH7</i> reduce the force generating capacity of sarcomeres in human familial hypertrophic cardiomyopathy	53
Chapter 4	Positive correlation between contractile dysfunction of the sarcomere and regional systolic strain in hypertrophic cardiomyopathy.	83
Chapter 5	Faster cross-bridge detachment and increased tension cost in human hypertrophic cardiomyopathy with the R403Q <i>MYH7</i> mutation	99
Chapter 6	A novel HCM mutation in cardiac troponin T primarily alters cross-bridge kinetics and increases the energetic cost of tension generation in human cardiac myofibrils.	129
Chapter 7	Tension cost in human hypertrophic cardiomyopathy with sarcomeric gene mutations is mutation location dependent.	149
Chapter 8	Gene-specific increase in the energetic cost of contraction in hypertrophic cardiomyopathy caused by thick filament mutations.	169
Chapter 9	Summary, Conclusions & Future perspectives	193
Chapter 10	Nederlandse Samenvatting	206
	List of Publications	210
	Dankwoord	213
	Curriculum Vitae	216
