Table of contents

Chapter 1	General introduction	...
Chapter 2	Biodegradable polymers in bone tissue engineering	...
Chapter 3	The effect of sterilization of poly(L-lactide-co-caprolactone) on the attachment, proliferation and ALP production of adipose stem cells	...
Chapter 4	Osteogenic differentiation strategies for adipose derived mesenchymal stem cells	...
Chapter 5	Rapid attachment of adipose stromal cells on resorbable polymeric scaffolds allow the one step surgical procedure for cartilage and bone tissue engineering purposes	...
Chapter 6	The use of Poly(L-lactide-co-caprolactone) as a scaffold for adipose stem cells in bone tissue engineering: application in a spinal fusion model	...
Chapter 7	Lumbar interbody fusion using a radiolucent polymeric cage filler in conjunction with autologous adipose stem cell therapy in a goat model	...
Chapter 8	Relation between radiological assessment and biomechanical stability of lumbar interbody fusion in a large animal model	...
Chapter 9	General discussion	...
Chapter 10	Summary	...
	Samenvatting	...
	List of publications	...
