TABLE OF CONTENTS

GENERAL INTRODUCTION

PART 1 Molecular Markers for IFNβ Therapy in Multiple Sclerosis

CHAPTER 1.1 Pharmacogenomics of Interferon-β Therapy in Multiple Sclerosis: IFN Signature Determines Pharmacological Differences Between Patients

CHAPTER 1.2 Interferon Regulatory Factor 5 Gene Variants and Pharmacological and Clinical Outcome of Interferon-β Therapy in Multiple Sclerosis

PART 2 Molecular Markers for Rituximab Therapy in Rheumatoid Arthritis

CHAPTER 2.1 Pharmacological Induction of Interferon Type I Activity Following Treatment with Rituximab Determines Clinical Response in Rheumatoid Arthritis

CHAPTER 2.2 The Interferon Type I Signature Towards Prediction of Non-response to Rituximab in Rheumatoid Arthritis Patients

PART 3 The Type I Interferon System in Relation to Disease Characteristics in Autoimmune Diseases

CHAPTER 3.1 Interferon Regulatory Factor 5 Gene Variant rs2004640 is Associated with Carotid Intimal Medial Thickness in Rheumatoid Arthritis Patients

CHAPTER 3.2 Autoantibody Specificities and Type I Interferon Pathway Activation in Idiopathic Inflammatory Myopathies
