CONTENTS

1)	General introduction and outline of the thesis	8
2)	Stroke work or systolic dP/dt_{\max} to evaluate acute response to cardiac resynchronization therapy: are they interchangeable? <i>European Journal of Heart Failure 2009;11:706-8</i>	30
3)	Prediction of long-term outcome of cardiac resynchronization therapy by acute pressure-volume loop measurements <i>European Journal of Heart Failure 2013;15:299-307</i>	38
4)	Effects of QRS duration and pacing location on pressure-volume loop evaluation of cardiac resynchronization therapy in end-stage heart failure <i>American Journal of Cardiology 2011;108:1581-8</i>	60
5)	Baseline end-systolic elastance is associated with response to cardiac resynchronization therapy <i>Submitted</i>	78
6)	Scar tissue guided left ventricular lead placement for cardiac resynchronization therapy in patients with ischemic cardiomyopathy: an acute pressure-volume loop study <i>American Heart Journal 2014;167:537-45</i>	94
7)	Bifocal left ventricular stimulation or targeted lead placement for optimal acute pump function improvement during cardiac resynchronization therapy? <i>Provisionally accepted for publication in Europace</i>	118
8)	Loss of opposite left ventricular basal and apical rotation predicts acute response to cardiac resynchronization therapy and is associated with long-term reversed remodeling <i>Journal of Cardiac Failure 2009;15:717-25</i>	138
9)	Prediction of response to cardiac resynchronization therapy by the misbalance in regional left ventricular myocardial work <i>Submitted</i>	160
10)	General discussion	182
	Summary	202
	Samenvatting	208
	Dankwoord	214
	Curriculum vitae and list of publications	220
