# Table of contents

<b>Table of contents</b>	v
<b>List of tables</b>	ix
<b>List of figures</b>	xi
<b>Chapter 1: Introduction</b>	
1.1 Recreation in the Netherlands	1
1.1.1 A definition of recreation	1
1.1.2 Trends in recreation demand	2
1.1.3 Trends in recreation supply	4
1.2 Trends in recreation demand modelling	8
1.3 The topics of this thesis	11
1.3.1 A short outlook on the literature	11
1.3.2 This thesis' research questions	13
1.3.3 An introduction to the chapters	14
<b>Chapter 2: Assessing the use value of the extra-urban landscape from an investigation of destination choice for nature-based recreation trips</b>	
2.1 Introduction	17
2.2 Landscape and recreation	20
2.3 The two-step destination choice model	22
2.4 Details of the application	24
2.4.1 The data sample and dependent variables	24
2.4.2 The explanatory variables	26
2.5 The estimation results	30
2.5.1 The first-step nested logit model estimates	30
2.5.2 The second-step ordinary least squares (OLS) regression estimates	34
2.5.3 A comparison with the standard discrete choice model	35
2.5.4 The marginal willingness-to-travel for the landscape amenities	36
2.5.5 Robustness analysis	39
2.5.6 Policy and the location of recreational hotspots in the Netherlands	43
2.6 Conclusion	46
<b>Chapter 3: What attracts the consumer participating in urban recreation to an agglomeration?</b>	
3.1 Introduction	49

3.2	Details of the application	51
3.2.1	The data sample	51
3.2.2	The agglomeration's amenities	53
3.3	The model	55
3.3.1	A two-step procedure	55
3.3.2	The effect of the travel distance and amenities on the consumer	57
3.3.3	The analysis of the alternative-specific constants	58
3.4	The estimation results	59
3.4.1	The first-step nested logit model estimates	59
3.4.2	The second-step linear regression model estimates	61
3.4.3	Robustness analysis	64
3.4.4	The marginal willingness-to-travel for the agglomeration amenities	67
3.5	Conclusion	70

**Chapter 4:** Accessibility, residential location, and recreation: trip generation and distribution choices for shopping and nature-based recreation

4.1	Introduction	73
4.2	A utility-consistent multi-stage budgeting framework	76
4.3	Details of the application	78
4.3.1	The data sample	78
4.3.2	The consumer's characteristics in the model	80
4.3.3	The destination's characteristics in the model	84
4.4	Specification of the empirical model	86
4.4.1	The structure of the model	86
4.4.2	The destination choice models	86
4.4.3	Nature-based recreation or recreational shopping?	88
4.4.4	The trip generation model	89
4.5	The estimation results	90
4.5.1	The two-step nested logit model estimates for recreational shopping	90
4.5.2	The two-step nested logit model estimates for nature-based recreation	95
4.5.3	The recreation activity type choice model estimates	97
4.5.4	The trip generation model estimates	101
4.5.5	Robustness analysis	104
4.6	Conclusion	107

**Chapter 5:** Recreation trips in nature: duration, travel mode and environment type

5.1	Introduction	111
5.2	The model	113
5.2.1	Model structure	113
5.2.2	The travel mode and destination choice for nature-based recreation	114
5.2.3	The time allocation decision	115
5.2.4	Further specification issues and discussion	116

5.3	Details of the application	118
5.3.1	The data sample	118
5.3.2	Classification of the environment types	118
5.3.3	The variables and some descriptive statistics	119
5.4	The estimation results	122
5.4.1	The destination and travel mode choice model estimates	122
5.4.2	The time allocation model estimates	125
5.4.3	Time-use and the travel-destination mode choice	128
5.5	A policy simulation	131
5.5.1	The expansion of urban park land in urban agglomerations	131
5.5.2	The effect of urban park expansion on the travel mode and destination choice	133
5.5.3	The effect of urban park expansion on the time allocation decision	134
5.6	Conclusion	137
<b>Chapter 6: Conclusion</b>		
6.1	Introductory remarks	141
6.2	Which destination type does the consumer prefer for recreation?	142
6.3	Which consumer type makes which recreational choices?	144
6.4	What policy implications does this thesis have?	146
