# TABLE OF CONTENTS

## Chapter 1  General introduction  8

1.1 Preface  10  
1.2 Neuron development  11  
1.3 Axonal transport  14  
1.4 The synaptic vesicle cycle  16  
1.5 The synaptic vesicle release machinery  18  
1.6 Synaptic plasticity  23  
1.7 Synaptic remodeling of protein content  26  
1.8 Aim and outline  31  
References  32

## Chapter 2  Munc18-1-Venus knock-in mice: a fluorescent mouse model for endogenous Munc18-1b  46

Abstract  48  
2.1 Introduction  49  
2.2 Results  52  
2.3 Discussion  60  
2.4 Experimental procedures  63  
References  66  
Supplemental figures  71

## Chapter 3  Munc18-1 redistributes in nerve terminals in an activity- and PKC-dependent manner  72

Abstract  74  
3.1 Introduction  75  
3.2 Results  76  
3.3 Discussion  84  
3.4 Experimental procedures  91  
References  94  
Supplemental figures  98
Chapter 4  Linear motion before vesicle fusion characterizes sustained secretion in chromaffin cells

Abstract 108
4.1 Introduction 109
4.2 Results 112
4.3 Discussion 123
4.4 Experimental procedures 125
References 127

Chapter 5  Role of FEZ1 in transport of syntaxin-1 vesicles in developing hippocampal neurons

Abstract 134
5.1 Introduction 135
5.2 Results 136
5.3 Discussion 140
5.4 Experimental procedures 146
References 149

Chapter 6  General discussion

6.1 Delivery of presynaptic protein to nascent synapses: vesicles and diffusion 157
6.2 Protein levels and post-translational modifications controlling synaptic strength 158
6.3 Membrane recruitment of synaptic and dense core vesicles in neurons: a role for actin? 162
6.4 Future directions 164

Nederlandse samenvatting 170
