# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Linkage between environment and organisms . . . . .	1
1.2	The great scallop, <i>Pecten maximus</i> . . . . .	2
1.2.1	Ecology . . . . .	2
1.2.2	Life cycle . . . . .	3
1.2.3	Feeding . . . . .	4
1.2.4	Genetics . . . . .	6
1.2.5	Sclerochronology . . . . .	7
1.3	Environmental variability and climate change . . . . .	8
1.4	Bioenergetics . . . . .	10
1.4.1	Environmental effect on metabolism . . . . .	10
1.4.2	Modeling of bivalve bioenergetics . . . . .	10
1.4.3	Dynamic Energy Budget theory . . . . .	12
1.5	Objectives and thesis outline . . . . .	13
<b>2</b>	<b>A DEB model for the great scallop</b>	<b>17</b>
2.1	Introduction . . . . .	18
2.2	Material and methods . . . . .	19
2.2.1	Model formulation . . . . .	19
2.2.2	Parameter estimation . . . . .	25
2.2.3	Study site, forcing and calibration data . . . . .	26
2.2.4	Model simulations . . . . .	28
2.3	Results . . . . .	29
2.3.1	DEB Parameters estimates . . . . .	29
2.3.2	Environmental forcing variables . . . . .	30
2.3.3	Feeding and food sources . . . . .	33
2.3.4	Model simulation . . . . .	34
2.4	Discussion . . . . .	40
2.4.1	Modeling the life-cycle of <i>P. maximus</i> . . . . .	40
2.4.2	Growth and feeding . . . . .	41
2.4.3	Reproduction . . . . .	43
2.4.4	Conclusions and perspectives . . . . .	45

<b>3</b>	<b>An application of the DEB model to define scallop habitat</b>	<b>47</b>
3.1	Introduction . . . . .	48
3.2	Material and methods . . . . .	50
3.2.1	Hydrodynamical and biogeochemical models . . . . .	50
3.2.2	The population dynamic model . . . . .	51
3.2.3	The individual physiological model . . . . .	53
3.2.4	Coupling of the models . . . . .	54
3.3	Results . . . . .	56
3.3.1	Hydrodynamical stabilization . . . . .	56
3.3.2	Physiological performances . . . . .	57
3.3.3	Coupling the four models . . . . .	59
3.4	Discussion . . . . .	61
3.5	Conclusions . . . . .	63
<b>4</b>	<b>Trophic sources of the great scallop</b>	<b>65</b>
4.1	Introduction . . . . .	66
4.2	Material and methods . . . . .	67
4.2.1	Pigment analysis . . . . .	68
4.2.2	Lipid analysis . . . . .	69
4.3	Results . . . . .	70
4.3.1	Seston pigment concentration and composition . . . . .	70
4.3.2	Pigment composition of the digestive contents . . . . .	74
4.3.3	Fatty acid and sterol composition of the digestive gland . . . . .	77
4.4	Discussion . . . . .	83
4.4.1	Validation of biomarkers . . . . .	83
4.4.2	Feeding ecology . . . . .	84
4.4.3	Ingestion, digestion and assimilation . . . . .	87
<b>5</b>	<b>Inversion of DEB model</b>	<b>89</b>
5.1	Introduction . . . . .	90
5.2	Material and methods . . . . .	91
5.2.1	The DEB model . . . . .	91
5.2.2	A linear equation of growth in DEB theory . . . . .	92
5.2.3	Theoretical investigations . . . . .	95
5.3	Results . . . . .	97
5.3.1	Growth time series smoothing tests . . . . .	97
5.3.2	Functional response reconstruction . . . . .	100
5.3.3	Interpolation tests . . . . .	101
5.3.4	Assimilation stops reconstruction . . . . .	102
5.3.5	Physiological history reconstruction . . . . .	103
5.3.6	Effect of shell size . . . . .	104
5.4	Discussion . . . . .	104
5.4.1	Inverted DEB model to reconstruct food assimilation . . . . .	104
5.4.2	A mechanistic method using one DEB equation . . . . .	106
5.4.3	Physiological state reconstruction . . . . .	107

---

5.4.4	Perspectives and further research . . . . .	108
<b>6</b>	<b>Reconstructing real physiological histories</b>	<b>109</b>
6.1	Introduction . . . . .	110
6.2	Material and methods . . . . .	111
6.2.1	Study sites and shell collection . . . . .	111
6.2.2	Measurement of growth trajectories . . . . .	113
6.2.3	Reconstruction method of physiological history . . . . .	114
6.2.4	Food proxies . . . . .	114
6.2.5	Statistical analysis . . . . .	114
6.3	Results . . . . .	115
6.3.1	Latitudinal gradient . . . . .	115
6.3.2	Bathymetric gradient . . . . .	117
6.3.3	Ontogenetic patterns? . . . . .	119
6.3.4	Comparing $f$ with observed food proxies . . . . .	120
6.3.5	Physiological variables . . . . .	122
6.4	Discussion . . . . .	122
6.4.1	Shell growth . . . . .	124
6.4.2	Latitudinal gradient . . . . .	124
6.4.3	Bathymetric gradient . . . . .	125
6.4.4	Local adaptations . . . . .	125
6.4.5	Linking functional response to food proxies . . . . .	126
6.4.6	Limits . . . . .	127
6.4.7	Perspectives and prospects . . . . .	127
<b>7</b>	<b>General discussion</b>	<b>129</b>
7.1	A Dynamic model of the Energy Budget of <i>P. maximus</i> . . . . .	129
7.1.1	Parameter estimation . . . . .	129
7.1.2	The growth challenge . . . . .	130
7.1.3	Feeding preference implemented through Synthesizing Units . . . . .	131
7.1.4	From the individual to the population . . . . .	132
7.2	Feeding ecology . . . . .	132
7.2.1	Living on the bottom, feeding on what comes from above	132
7.2.2	Food availability - What to eat, what to reject? . . . . .	133
7.2.3	Feeding behaviour . . . . .	135
7.3	Feeding the scallop, feeding the model . . . . .	136
7.3.1	The almighty chlorophyll- <i>a</i> . . . . .	136
7.3.2	Other food proxies . . . . .	137
7.3.3	Towards a multi-proxy approach . . . . .	137
7.4	Effect of variable environments on life history . . . . .	138
7.4.1	Inter-individual variability . . . . .	138
7.4.2	Reproduction . . . . .	139
7.4.3	Origin of spatialized growth variations: Physiological plasticity? . . . . .	140

7.4.4	Bioenergetic cycle . . . . .	144
7.5	Concluding remarks and perspectives . . . . .	147
7.5.1	Better, faster, stronger... . . . .	147
7.5.2	Winter is coming . . . . .	148
7.5.3	Paleo-reconstructions . . . . .	149
7.5.4	Climate change consequences . . . . .	149
7.5.5	Linking external and internal forcing . . . . .	150
<b>A</b>	<b>Reconstruction of functional response in all study sites</b>	<b>151</b>
<b>B</b>	<b>Simulations using the two parameter sets</b>	<b>163</b>
	<b>Bibliography</b>	<b>166</b>
