TABLE OF CONTENTS

Chapter 1	General introduction	11
	Behavioral phenotyping	13
	Genetically engineered mice: key to human genetic disease mechanisms	15
	Importance of the synapse in psychiatric disorders	18
	Aim of this thesis	22
Chapter 2	High throughput phenotyping of avoidance learning in mice discriminates different genotypes and identifies a novel gene	25
	Introduction	28
	Material & methods	29
	Results	32
	Discussion	40
	Supplemental	43
Chapter 3	Heterozygous Munc18-1 mice exhibit an increased anxiety-like phenotype but no cognitive impairment	57
	Introduction	60
	Material & methods	60
	Results	62
	Discussion	68
	Conclusions	71
	Supplemental	72
Chapter 4	Functional characterization of the PCLO S4814A variant associated with major depressive disorder reveals cellular but not behavioral differences	89
	Introduction	92
	Results	93
	Discussion	106
	Material & methods	107
	Supplemental	114

Chapter 5	Random mutagenesis by transposon-based gene trap insertion in mice identifies a role of Ubn1 in avoidance learning and fear conditioning	125
	Introduction	128
	Material and methods	129
	Results	133
	Discussion	139
	Supplemental	143
Chapter 6	General discussion	145
	General aim	147
	Limitations of standalone tests	148
	Home cage relevance	149
	The validation of new paradigms	152
	Limitations of a new paradigm	154
	Accuracy of animal models	155
	Future directions	156
	Final remarks	157
Chapter 7	Material & Methods	159
	Laboratory animals	161
	The test battery	161
	Automated home cage observation and data analyses	169
	Statistical analysis	170
	References	173
	Abbreviations	187
	Samenvatting	189
	Summary	193
	Acknowledgment	195
