Disease modeling in lung cancer
Cost-effectiveness of individualized treatment strategies and modeling challenges

ACADEMISCH PROEFSCHRIFT

VRIJE UNIVERSITEIT

ter verkrijging van de graad Doctor aan
de Vrije Universiteit Amsterdam,
op gezag van de rector magnificus
prof.dr. F.A. van der Duyn Schouten,
in het openbaar te verdedigen
ten overstaan van de promotiecommissie
van de Faculteit der Geneeskunde
op woensdag 24 juni 2015 om 11.45 uur
in de aula van de universiteit,
De Boelelaan 1105

by

Mathilda Lambertha Bongers
geboren te Nijmegen

Content

Chapter 1 General introduction 7

Part I

Chapter 2 Cost-effectiveness of treatment with new agents in advanced non-small cell lung cancer: a systematic review 21
Chapter 3 Treatment and survival of non-small cell lung cancer patients in the Netherlands 59
Chapter 4 Costs of non-small cell lung cancer in the Netherlands 75

Part II

Chapter 5 Multi-state statistical modeling: a tool to build a lung cancer micro-simulation model that includes parameter uncertainty and patient heterogeneity 95
Chapter 6 Individualized PET-based accelerated radiotherapy is cost effective compared to conventional radiotherapy: a model-based evaluation 127
Chapter 7 Model-based assessment of the cost-effectiveness of conventional and innovative chemo-radiation schemes in non-small cell lung cancer 155

Chapter 8 General discussion 189

Chapter 9 Summary 205
Samenvatting 211
Dankwoord 217
List of publications 219
PhD portfolio 220
About the author 221
