CONTENTS

Chapter 1	General introduction	7
Chapter 2	Suppressed inflammatory gene expression during human hypertrophic scar compared to normotrophic scar formation	29
Chapter 3	Differential response of human adipose tissue-derived mesenchymal stem cells, dermal fibroblasts and keratinocytes to burn wound exudates: potential role of skin specific chemokine CCL27	55
Chapter 4	Skin-derived CCL27 stimulates release of inflammatory factors from monocytes during cutaneous wound healing	81
Chapter 5	The influence of hypoxia and fibrinogen variants on the expansion and differentiation of adipose tissue-derived mesenchymal stem cells	95
Chapter 6	Tissue engineered human scar models identify extracellular matrix and inflammatory cytokine differences between normotrophic, hypertrophic and keloid scars	115
Chapter 7	Development, validation and testing of a human tissue engineered hypertrophic scar model	141
Chapter 8	Human hypertrophic and keloid scar models: principles, limitations and future challenges from a tissue engineering perspective.	167
Chapter 9	Summary and General Discussion	191
Chapter 10	Nederlandse samenvatting	203
	List of publications	209
	Dankwoord	211
	About the author	215
