CONTENTS

1	Introduction	1
1.1	Residential and Employment Locations and Commuting	1
1.2	Alonso's Theory of Movements	3
1.3	Estimation of Spatial Interaction	6
1.4	Structure of the thesis	9
2	Developments in Spatial Interaction Modeling.....	13
2.1	Introduction.....	13
2.2	Spatial Interaction Modeling	17
	<i>Wilson's Family of SIMs – Alonso's Theory of Movements (ATM)</i>	
2.3	Alonso's Theory of Movements	25
	<i>General formulation of the model – Equilibrium formulation – ATM and Wilson's Family of SIMs – A numerical example</i>	
2.4	Interpretation.....	32
	<i>Systemic variables – Macro-elasticities – Entropy – Other approaches</i>	
2.5	Econometric issues	40
	<i>Econometric specification – Estimation – The allocation component and the balancing factors – The origin and destination components: simultaneous equations</i>	
2.6	Conclusion	46

3	Estimation methods for Alonso's Theory of Movements.....	51
3.1	Introduction.....	51
3.2	Alonso's Theory of Movements	53
3.3	Review	57
	<i>Alonso's attempt – Partioning the problem – Other methods –</i>	
	<i>Recapitulation</i>	
3.4	Estimation	64
	<i>Econometric specification – Balancing factors – Analysis</i>	
3.5	Instrumental Variables.....	70
	<i>Simple methods – Iterative method – Algorithm – Theoretical considerations</i>	
3.6	Conclusion	76
4	Estimation of the Distance-Decay function for Commuting.....	79
4.1	Introduction.....	79
4.2	Theory.....	81
4.3	Data.....	86
4.4	Econometrics	90
4.5	Inference	93
4.6	Evaluation.....	99
	Appendix 4A Weighted least-squares with balancing factors.....	103
	Appendix 4B The logistic function	106

5	Estimation of the Systemic Parameters using Instrumental Variables	107
5.1	Introduction.....	107
5.2	Modeling the location of jobs and population	110
5.3	Distance-decay and balancing factors	114
5.4	Estimation of the systemic parameters	117
	<i>Iterative Instrumental Variables Estimation – Applied model specification –</i>	
	<i>Other estimation methods</i>	
5.5	Results and discussion	121
	<i>Parameter estimates – Comparison of estimation methods – Remarks</i>	
5.6	Conclusion	127
	Appendix 5A Data source.....	129
	Appendix 5B Software	130
	Appendix 5C Hamerslag’s Transportation Model with Elastic Constraints	130
	<i>Hamerslag 1972 and IVVS – Hamerslag 1975 – Fortuijn 1976 – Further</i>	
	<i>work – Equivalence of models</i>	
6	Conclusions and suggestions for further research.....	143
6.1	Conclusions.....	143
6.2	Research direction: Including prices	145
6.3	Research direction: Theory	152
6.4	Research direction: Estimation	154
6.5	Research direction: Application	155
6.6	The End.....	155
	References	157
	Samenvatting in het Nederlands (Summary in Dutch)	173

LIST OF TABLES

2.1 Overview of symbols in Spatial Interaction Models	17
2.2 Example: original exogenous variables ($V_i, W_j, F_{ij} * 10.000$).....	31
2.3 Example: original flows, outflows, and inflows (T_{ij}, O_i, D_j).....	31
2.4 Example: predicted flows, according to ATM ($\alpha = \beta = 0.5$)	31
2.5 Example: predicted flows, according to doubly constrained model.....	31
2.6 Macro-elasticities in various models (effects on $T, O,$ and D).....	35
3.1 Two formulations of the ATM model	58
4.1 Definitions of dummy variables	89
4.2 Estimation results for various decay functions.....	96
4.3 Value of decay functions for selected values of travel cost	100
4.4 Elasticity of decay functions with respect to travel cost, for selected values of travel cost.....	101
5.1 Estimated systemic variables, for selected municipalities.....	116
5.2 Estimation results for equation (5.16), various estimation methods	122
5.3 Estimation results for equation (5.17), various estimation methods	123

LIST OF FIGURES

4.1 Map of Denmark, with division into counties	88
4.2 The logarithm of the commuting flow (relative to random commuting) as a function of the logarithm of travel cost.....	94
4.3 Weighted residuals of various decay functions (as functions of the logarithm of travel cost)	97
4.4 Various decay functions in a log-log setting	99
5.1 Interaction of population and employment through commuting	111
