Contents

1	Introduction	1
2	Climate Change Skepticism in the Face of Catastrophe	7
2.1	Introduction	7
2.2	Model	12
2.3	Solving for Optimal Policy	15
2.3.1	The Climate-Skeptical Policy Maker	15
2.3.2	The Climate-Aware Policy Maker	17
2.3.3	Calibration	18
2.3.4	Steady State Analysis	20
2.4	Results	21
2.4.1	The Climate-Skeptical Policy Maker	21
2.4.2	The Climate-Aware Policy Maker	23
2.4.3	Mixed Expectations - Policy Makers with Moderate Skepticism Levels	24
2.4.4	Welfare Comparison	25
2.5	Conclusion	26
2.6	Appendix	28
2.6.1	The Projection Method Used to Solve the Climate-Skeptical Pol- icy Maker's Problem	28
2.6.2	The Value Function Iteration Method Used to Solve the Climate- Aware Policy Maker's Problem	28
2.6.3	Endogeneity of Post Catastrophe Capital: Sensitivity Analysis .	30
2.6.4	Simulation Plots	32
3	Can Fossil Price Volatility Spur Investment in Renewable Energy?	43
3.1	Introduction	43
3.2	Model	46
3.3	Numerical Illustrations of the Positive and Negative Effects of Volatility on Innovation	49

3.4	Full Equilibrium Results	54
3.4.1	Numerical Calculations	55
3.5	Conclusion	60
3.6	Appendix	62
3.6.1	Derivation of the Positive Effect of Volatility	62
3.6.2	Functional Forms	62
3.6.3	Calibration	63
3.6.4	Numerical Solution Method – Projection Analysis	64
3.6.5	Results for an Alternative Calibration	65
4	Subsidizing Renewables in the Presence of a Dirty Backstop	67
4.1	Introduction	67
4.2	Model	69
4.3	Social Optimum	71
4.3.1	Solving the Social Optimum Problem	71
4.3.2	Solving the Laissez-Faire Equilibrium	74
4.3.3	Calibration	74
4.3.4	Policy Simulations	75
4.4	Second-Best Policies	77
4.4.1	Policy Simulations	78
4.4.2	Announcement Effects	79
4.4.3	Varying Damage Intensity and Cost of Renewables	79
4.5	Conclusion	81
4.6	Appendix	84
4.6.1	Description of Different Regimes	84
4.6.2	Numerical Methods	85
4.6.3	Proof of no Simultaneous Use in the Market and Second Best	88
4.6.4	Commitment Effects	88
4.6.5	Proof of no Green Paradox if Renewables are After Coal	90
5	Battle for Climate and Scarcity Rents: Beyond the Linear-Quadratic Case	95
5.1	Introduction	95
5.2	The Model	99
5.2.1	Demand for Oil and Private Consumption in Industria	100
5.2.2	The Government of Industria	100
5.2.3	The Government of Oilrabia	101
5.3	Efficient and Open-Loop Nash Equilibria	102
5.3.1	Efficient Equilibrium	102

5.3.2	Open-Loop Nash Equilibrium: Carbon Taxation in Industria . .	104
5.3.3	Open-Loop Nash Equilibrium: Oil Pricing by Oilrabia	105
5.3.4	Open-Loop Nash Equilibrium Outcome	106
5.3.5	Comparing the Open-Loop Nash and Efficient Equilibria	107
5.4	Feedback Nash Equilibrium	112
5.4.1	The Feedback Rule for the Optimal Carbon Tax	112
5.4.2	The Optimal Feedback Rule for the Oil Price	113
5.4.3	Equilibrium	113
5.4.4	Time-Domain Representation and Comparison with the Open- Loop Nash Equilibrium Outcome	114
5.5	Illustrative Numerical Simulations	116
5.5.1	Quadratic Production Function and Linear Oil Demand	117
5.5.2	Exponential Production Function with Semi-Loglinear Oil Demand	121
5.5.3	Cobb-Douglas Production Function and Isoelastic Oil Demand .	122
5.5.4	Non-HARA Production Function: Shifted Unit-Elastic Oil Demand	123
5.6	Concluding Remarks	126
5.7	Appendix	127
5.7.1	Calibration Details	127
5.7.2	Solving for Equilibria Numerically	128
5.7.3	Solving for Equilibria with Infinite Marginal Production at Zero	129

6 Conclusion
