Scope and outline 8-10

Chapter 1 ALS as a distal axonopathy: molecular mechanisms affecting neuromuscular junction stability in the presymptomatic stages of the disease
E.B. Moloney, F. de Winter, and J. Verhaagen
Frontiers in Neuroscience 2014; 8:252

Chapter 2 Neuropilin-derived scavenger molecules with specificity for semaphorin 3A
E.B. Moloney, V. Mecollari, B. Blits, F. de Winter, and J. Verhaagen

Chapter 3 Viral vector-mediated expression of neuropilin-derived scavenger molecules in the gastrocnemius muscle modifies motor performance in the G93A-hSOD1 ALS mouse model
E.B. Moloney, B. Hobo, F. de Winter, and J. Verhaagen

Chapter 4 Viral vector-mediated overexpression of the repulsive axon guidance cue semaphorin 3A in mouse skeletal muscle does not induce changes in motor function or alter the integrity of the neuromuscular junction
E.B. Moloney, B. Hobo, E. Ehlert, F. de Winter, and J. Verhaagen

Chapter 5 Expression of a mutant SEMA3A protein with diminished signaling capacity does not alter ALS-related motor decline, or confer changes in NMJ plasticity after BotoxA-induced paralysis of male gastrocnemius muscle
E.B. Moloney, B. Hobo, F. de Winter, and J. Verhaagen

Chapter 6 Summary and general discussion
E.B. Moloney, F. de Winter, and J. Verhaagen
