TABLE OF CONTENTS

Chapter 1	General Introduction	9
Chapter 2	A novel mouse model of Peritoneal Dialysis: combination of uraemia and long-term exposure to PD fluid	29
Chapter 3	The dipeptide alanyl-glutamine ameliorates peritoneal fibrosis and attenuate IL-17 dependent pathways during Peritoneal Dialysis	43
Chapter 4	Effect of Ala-Gln dipeptide addition to conventional PDF on neutrophils rolling and adhesion in a uremic mouse PD model	63
Chapter 5	Immune-regulatory molecule CD69 controls peritoneal fibrosis	75
Chapter 6	Impact of Low Glucose Degradation Products Bicarbonate/Lactate-Buffered Dialysis Solution in an uremic mouse Peritoneal Dialysis exposure model	109
Chapter 7	Effects of conversion to a bicarbonate/lactate buffered, neutral pH, low GDP PD regimen in prevalent PD: a 2 years randomized clinical trial	125
Chapter 8	Effluent and serum protein N-glycosylation is associated with inflammation and transport characteristics in Peritoneal Dialysis patients	145
Chapter 9	General Discussion	171
Appendices	English Summary	187
	Dutch Summary	191
	Italian Summary	194
	Curriculum Vitae	199
	List of publications	200
	Acknowledgements	203
