TABLE OF CONTENTS

Chapter I	13
General introduction	13
Mouse v. macaque	17
Primary visual cortex	18
Feedforward and feedback processing	20
Classification of inhibitory interneurons	22
Glutamate receptors	25
Receptor expression and pharmacology	27
Thesis organization	28
References	31
Chapter II	41
Calcium-binding protein expression in inhibitory interneurons of mouse and macaque V1	41
Abstract	43
Introduction	45
Materials and methods	46
Fixation and sectioning	46
Immunohistochemistry	47
Imaging and image processing	48
Results	52
Overall cell frequencies	53
Distribution of CBPs between the cortical layers	54
Prevalence of CBPs within the cortical layers	56
Continuous mapping of CBPs along the cortical depth	57
Discussion	60

Methodological concerns	60
CBPs versus alternative labelling schemes	61
Layer borders versus continuous mapping	63
Complementary PV and CB distribution and function	63
Integration with previous results	64
Differences to other cortical areas	65
Summary	66
References	67
Chapter III	73
Inhibitory interneuron classes express complementary AMPA-receptor patterns in macaque primary visual cortex	73
Abstract	75
Introduction	77
Materials and Methods	79
Fixation and sectioning	79
Immunohistochemistry	80
Imaging and image processing	82
Results	86
Parvalbumin-immunoreactive cells	86
Calbindin-immunoreactive cells	91
Calretinin-immunoreactive cells	94
Discussion	97
Methodological issues	98
Subunit composition and dimerization	99
Synaptic calcium influx	100
Pharmacology	100
Differences between cortical layers	101
Conclusion	101
References	103
Chapter IV	109
The expression of NMDA receptors in different classes of inhibitory interneurons in area V1 of the macaque monkey	109
Abstract	111

Introduction	113
Materials and Methods	115
Fixation and sectioning	115
Immunohistochemistry	115
Imaging and image processing	118
Quantification	119
Results	121
CBP expression and normalization	122
Expression of GluN2 at the cell body	122
Neuropil expression	123
Discussion	127
Methodological concerns	128
Subunits of functional NMDARs	129
Two broad classes of interneurons in macaque V1	130
Synaptic calcium influx	130
AMPA and NMDAR combinations	131
Summary	131
References	133
Chapter V	139
Different glutamate receptors convey feedforward and recurrent processing in macaque V1	139
Abstract	141
Introduction	143
Materials and Methods	145
Task and training	145
Electrophysiological methods	146
Data Analysis	148
Results	148
Task and Behaviour	148
The effect of NMDAR antagonists at example recording sites	149
Effects of NMDAR antagonists at the population level.	150
Effects of an AMPA-R antagonist.	152
Discussion	154
Are feed-forward connections AMPA-ergic and recurrent connections NMDA-ergic?	156

Other mechanisms that could explain the effect of NMDA blockers on FGM.	158
Is feedback to V1 necessary to solve the figure-ground task?	159
Supplementary Information	159
Supplemental Experimental Procedures	159
Stimuli	159
Surgical procedures	160
Drug injections	161
Judging the depth of the electrode in cortex	162
Reaction-time version of the task	163
Supplemental Results	164
Number of recordings per drug, per monkey	164
Receptive field measurement, properties and selectivity	164
Further example drug-effects	167
Time-course of the drug effects	169
The effect of CNQX and aCSF on peak responses and FGM	169
Differences between cortical layers	170
Multi-unit envelope recordings	172
Eye movement controls	176
References	179
Chapter VI	185
General discussion	185
Objective quantification	187
Species correspondence	187
Linking anatomy and function	188
Pharmacology	189
Concluding remarks	190
References	191
Summary	195
Samenvatting	199

List of abbreviations	205
Thank you	207
Journal publications	209
Conference Abstracts	211
Notes	213
