Contents

Summary	I
1 Introduction	1
1.1 Methane in the Earth atmosphere	1
1.1.1 Sources of methane	1
1.1.2 Methane as a greenhouse gas	3
1.1.3 Atmospheric chemistry involving methane	3
1.2 Monitoring atmospheric methane concentrations	5
1.2.1 Assessment of methane emissions	5
1.2.2 Ground-based observations of the atmosphere	7
1.2.3 Satellite solar back-scatter radiometers	8
1.2.4 The GOSAT mission	9
1.3 A general retrieval scheme	16
1.3.1 Forward model	16
1.3.2 Inversion method	18
1.4 From Earth-radiance to methane concentration	22
1.4.1 Proxy method	22
1.4.2 physics-based method	23
1.5 Objectives and organisation of this thesis	26
2 Methane retrievals from GOSAT SWIR	29
2.1 Introduction	30
2.2 GOSAT measurements	31
2.3 Retrieval algorithm	32
2.3.1 Inversion	32
2.3.2 Proxy retrieval	34
2.3.3 Physics-based retrieval	36

2.4	Algorithm verification	37
2.4.1	Validation with ground-based measurements	37
2.4.2	Scenarios not covered by ground-based measurements	45
2.5	Conclusions	48
3	Efficient radiative transfer in cloudy atmospheres	53
3.1	Introduction	54
3.2	The forward-adjoint radiative transfer theory	56
3.3	Separating N orders of scattering	59
3.4	Recursive solver for low-order intensity field	61
3.5	Solving the high-order intensity field	62
3.6	Model implementation	67
3.6.1	Truncation scattering order N	67
3.6.2	Angular integration within recursive solver	70
3.6.3	Layer splitting and quadrature order	71
3.6.4	Techniques for solving the linear system	71
3.6.5	Adjoint transport in pseudo-forward formulation	71
3.7	Model verification	72
3.8	Model efficiency	77
3.9	Conclusions	79
4	Methane retrievals in cloudy atmospheres	83
4.1	Introduction	84
4.2	Retrieval algorithm	86
4.3	Synthetic retrievals	89
4.4	Data	95
4.5	Results	97
4.6	Conclusions	111
5	Conclusions	113
5.1	Outlook	116
