Table of contents

Preface and acknowledgements

1. Introduction	1
1.2. Future natural disaster risk under climate and socio-economic change	3
1.2.1. Impact of socio-economic developments on natural catastrophe damage.....	3
1.2.2. Climate change and the frequency and severity of natural disasters.....	4
1.3. Assessing natural catastrophe risk	7
1.3.1. Expert modelling of natural disaster risk	7
1.3.2. Households' assessments of risk and behaviour	9
1.4. Managing natural hazards risks	10
1.4.1. Economic resilience to natural disasters	10
1.4.2. Risk management strategies.....	12
1.5. Role of insurance in adaptation to natural disasters.....	15
1.6. Research questions, methods, and outline of the thesis	19
Chapter 2. Cumulative CO ₂ emissions: Shifting international responsibilities for climate debt	23
2.1. Introduction	23
2.2. Historical and projected cumulative CO ₂ emissions.....	24
2.2.1. Method.....	24
2.2.2. Results.....	26
2.2.3. Discussion.....	28
2.3. Conclusions	29

Part I: Climate change impacts on insured disaster losses

Chapter 3. Climate change and increased risk for the insurance sector: A global perspective and an assessment for the Netherlands.....	32
3.1. Introduction	32
3.2. The relevance of climate change for the insurance sector worldwide	35
3.3. Observed climate change and projections for the Netherlands	38
3.4. Risk-sharing arrangements of weather risks in the Netherlands.....	41
3.5. Possible responses by the insurance industry to climate change	54
3.6. Conclusions	56
Chapter 4. Climate change and hailstorm damage: Empirical evidence and implications for agriculture and insurance.....	59
4.1. Introduction	59
4.2. Dependence of hailstorm damage on temperature and precipitation	62
4.2.1. Indicators of hailstorm damage used in other studies	62
4.2.2. Temperature and precipitation data used in this study	64

4.3. Hailstorm damage insurance and data on hailstorm damage used in the analysis	65
4.3.1. Hailstorm damage insurance for the agricultural sector in the Netherlands.....	65
4.3.2. Hailstorm damage data used in the analysis.....	67
4.3.3. Main relations between hailstorm damage and temperature	71
4.4. Estimation results.....	73
4.4.1. Tobit estimation results of hailstorm damage models.....	73
4.4.2. Comparison of results with other studies	83
4.5. Extrapolations of hailstorm damage using climate change scenarios	84
4.6. Economic implications: Adaptation by agricultural and insurance sectors to the projected increase in hailstorm damage.....	87
4.7. Conclusions	90
Appendix 4.A. Descriptive statistics.....	92
Appendix 4.B. Statistical methods.....	92
Appendix 4.C. Estimation results for high damage months.....	93
Appendix 4.D. Estimation results for various specifications.....	94

Part II: Flood insurance and damage mitigation

Chapter 5. Insurance against climate change and flooding in the Netherlands: Present, future, and comparison with other countries.....	99
5.1. Introduction	99
5.2. Current risk-sharing arrangements of flood damage in the Netherlands.....	101
5.3. Suggestions to manage risk with private flood insurance	103
5.3.1. Risk spreading and segregation.....	103
5.3.2. Limiting disaster damage by loss-reducing incentives and monitoring	104
5.4. Problems associated with private flood insurance arrangements and suggestions for possible solutions.....	106
5.4.1. Risk and uncertainty.....	107
5.4.2. Information asymmetries: Adverse selection and moral hazard	107
5.4.3. Correlated risks	109
5.5. International experience of flood insurance arrangements	112
5.5.1. The United Kingdom	113
5.5.2. France.....	114
5.5.3. Germany.....	114
5.5.4. Summary of risk-sharing arrangements	115
5.6. Conclusions	116
Chapter 6. Dealing with uncertainty in flood management through diversification.....	119
6.1. Introduction	119

6.2. Modern Portfolio Theory	121
6.3. Climate change and flood management in the Netherlands	125
6.4. Application of modern portfolio theory to flood protection	128
6.5. Discussion and interpretation of results	136
6.6. Conclusions	139
Chapter 7. Willingness of homeowners to mitigate climate risk through insurance.....	141
7.1. Introduction	141
7.2. Flood risk management in the Netherlands.....	144
7.3. Explanation of the survey	147
7.4. Descriptive statistics of the willingness to undertake mitigation.....	151
7.5. Estimating the potential contribution of mitigation in limiting flood damage.....	155
7.6. A statistical model of the decision to mitigate: Buy sandbags as a water barrier	161
7.7. Conclusions	166
Appendix 7.A. Questions about mitigation and insurance.....	169
Appendix 7.B. The statistical model and overview of the variables and descriptive statistics.....	170
Chapter 8. Preparing the Netherlands for sea level rise: Willingness of homeowners to invest in eliminating flood risk through elevation.....	173
8.1. Introduction	173
8.2. Elevating buildings as a sustainable long run water management strategy	175
8.3. Willingness of households to invest in elevating houses	176
8.3.1. The survey.....	176
8.3.2. Sample characteristics.....	178
8.3.3. Willingness to invest in eliminating flood risk through elevation.....	179
8.3.4. Factors determining the willingness to invest in elevation	180
8.4. Conclusions	183
<u>Part III: Flood risk perceptions and demand for flood insurance</u>	
Chapter 9. Bounded rationality, climate risks, and insurance: Is there a market for natural disasters?.....	186
9.1. Introduction	186
9.2. Climate change and the risk of flooding	188
9.3. Estimating demand for flood insurance	189
9.4. Conclusions	199
Appendix 9.A. Mathematical derivations	201
Chapter 10. Dependence of flood risk perceptions on socio-economic and objective risk factors.....	202
10.1. Introduction.....	202
10.2. Flood risk and perceptions in the Netherlands.....	204
10.2.1. Flood risk in the Netherlands	204

10.2.2. Studies on perceived flood risk in the Netherlands	205
10.3. The psychology of the formation of risk perceptions	206
10.4. Explaining the survey and variables used in modelling risk perception	208
10.4.1. Implementation of the survey.....	208
10.4.2. Sample characteristics.....	209
10.5. An examination of perceptions of flood risk in the Netherlands	210
10.6. Results of statistical analyses of factors determining risk perception.....	217
10.6.1. Statistical methods	217
10.6.2. Explanatory variables used in the statistical analysis.....	218
10.6.3. Estimation results.....	222
10.7. Conclusions and policy implications	229
Appendix 10.A. Questions used to elicit risk perception.....	232
Chapter 11. Risk attitudes to low-probability climate change risks: WTP for flood insurance.....	233
11.1. Introduction.....	233
11.2. Communicating small probabilities in surveys.....	235
11.3. Explanation of the questionnaires	237
11.3.1. The commodity valued.....	237
11.3.2. Pre-tests.....	237
11.3.3. Structure of the questionnaires.....	238
11.4. Results of the survey.....	240
11.4.1. Descriptive statistics of the willingness-to-pay questions.....	240
11.4.2. A model of WTP for flood insurance.....	242
11.4.3. Estimation method and coding of the explanatory variables.....	244
11.4.4. Estimation results of the panel Tobit model.....	245
11.5. Conclusions	250
Appendix 11.A. Determination of risk using a risk ladder	253
Appendix 11.B. Payment card	254
Appendix 11.C. Explanatory variables and descriptive statistics	254
Chapter 12. Monetary valuation of insurance against flood risk under climate change	256
12.1. Introduction.....	256
12.2. Explanation of the questionnaires	259
12.2.1. The commodity valued.....	259
12.2.2. Pre-tests.....	259
12.2.3. Structure of the questionnaires.....	259
12.3. Experimental design and estimation method	261
12.3.1. Experimental design.....	261
12.3.2. Estimation methods.....	262

12.4. Estimation results of the choice models for flood insurance demand	264
12.4.1. Results of a model for insurance demand without heterogeneity	265
12.4.2. Results of a model for insurance demand with observed and unobserved heterogeneity	267
12.5. Market penetration and WTP for flood insurance under various climate change and socio-economic scenarios	277
12.5.1. Demand curves for flood insurance	277
12.5.2. Market shares under various climate change and socio-economic scenarios	279
12.5.3. Willingness-to-pay estimates for flood insurance using mixed logit	280
12.6. Policy implications and conclusions	284
Appendix 12.A. Overview of attributes and levels of the choice experiment	287
Appendix 12.B. Explanatory variables and descriptive statistics	288
Appendix 12.C. Statistical details	290
Appendix 12.D. Kernel plots of random parameters	291
13. Conclusions	292
13.1. Background, aims, and research questions	292
13.2. Conclusions of part I: Climate change impacts on insured disaster losses	294
13.3. Conclusions of part II: Flood insurance and damage mitigation	295
13.4. Conclusions of part III: Flood risk perceptions and demand for flood insurance	298
13.5. Recommendations for future research	301
