List of tables

	page
Table 3.1: Description of a soil profile at the measurement site.	48
Table 3.2: Characteristics of the research site.	48
Table 3.3: Ranges of values used in the quality check of the meteorological data.	50
Table 3.4: Water balance components total per year and averaged per day.	52
Table 3.5: NEE, GEP and R_{eco} for growing seasons, non-growing seasons and whole years over 2004, 2005 and 2006.	55
Table 3.6: Regression analyses of relations between CH_4 fluxes, soil temperature and water level for relatively dry land, saturated land and ditches.	57
Table 3.7: Annual totals of CH_4 emission from the relatively dry land, the saturated land and the ditches as well as the weighted average.	58
Table 3.8: Results of the water analyses for Total Carbon in the water, water fluxes over the year and annual fluxes of TC transported by water.	60
Table 3.9: Results of the water analyses for dissolved CH_4 in the water, water fluxes over the year and total fluxes of dissolved CH_4 transported by water.	60
Table 3.10: Summary of all carbon fluxes in the research area over 2005.	62
Table 4.1: Results of the 10-day calibration experiment with two standard gases of 125 and 2002 ppb respectively.	75
Table 4.2: Summary of results of 1Hz eddy covariance, disjunct eddy covariance and REA compared to 10Hz eddy covariance.	86
Table 5.1: Summary of the results from the chamber measurements, T_{s1}/T_{water} , WL_{soil} and root depth.	104
Table 5.2: Results from the balanced one-way ANOVA analyses and MCA.	107
Table 5.3: Results from the regression analyses of CH_4 fluxes with T_{s1}/T_{water} , T_{s15} , R_{eco} and WL_{soil} , the linear relation of WL_{soil} with T_{s1} and the relation of CH_4flux_{corr} with WL_{soil} .	108
Table 5.4: Results from the regression analyses of night time and daytime data of the footprint analysis for the 2006 summer period and the 2007 autumn period.	115

	page
Table 5.5: Results from the regression analyses of the relation between CH ₄ fluxes measured with eddy covariance and all other environmental variables.	118
Table 6.1: Overview of all vegetation species per vegetation type recorded with the Relevé method in May 2006 and May 2007, the areas covered by the vegetation types and the percentage of bare soil, litter and vegetation coverage, <i>S</i> and <i>H'</i> per vegetation type.	139
Table 6.2: Overview of all soil and vegetation variables and flux chamber measurements.	143
Table 6.3: Results of the correlation coefficient analyses performed with data from all vegetation types all vegetation types except Typha type and the Typha type.	150
Table 6.4: Results of the correlation coefficient analysis performed with average values from all vegetation types and all vegetation types except the Typha type.	151
Table 6.5: Results of the factor analyses and the correlation coefficient analyses of the scores on the respective axes with corresponding CH ₄ fluxes.	153
Table 6.6: Results of the regression analyses with the CH ₄ flux as dependent variable.	154
Table 7.1: Overview of the short term, transient and long term effects of rewetting due to management and temperature rise due to climate change on net CO ₂ and CH ₄ emissions.	175
Table 7.2: Overview of the effects of the effects various peat restoration practices on net CO ₂ and CH ₄ emissions.	181
