Towards ambulatory assessment of spinal loading in the field

Gert S. Faber

The work reported in this thesis was performed at the Research Institute MOVE, Faculty of Human Movement Sciences, VU University Amsterdam, The Netherlands. The research was funded by the Dutch Ministry of Economic Affairs and SenterNovem (the FreeMotion project), Stichting Arbouw, the Royal Netherlands Navy, and STEP Nederland.

Cover photo: The cover photo was taken on the salt planes of Uyuni, Bolivia.

ISBN: 9789053830086

VRIJE UNIVERSITEIT

Towards ambulatory assessment of spinal loading in the field

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad Doctor aan
de Vrije Universiteit Amsterdam,
op gezag van de rector magnificus
prof.dr. L.M. Bouter,
in het openbaar te verdedigen
ten overstaan van de promotiecommissie
van de faculteit der Bewegingswetenschappen
op vrijdag 25 juni 2010 om 13.45 uur
in de aula van de universiteit,
De Boelelaan 1105

door

Gert Simon Faber

geboren te Amsterdam

promotor: prof.dr. J.H. van Dieën

copromotor: dr. I. Kingma

CONTENTS

Publications by the author	7
Chapter 1 General introduction	13
Chapter 2 The effects of ergonomic interventions on low back moments are attenuated by changes in lifting behaviour	29
Chapter 3 Effects of horizontal transport and familiarisation with different working methods on low back loading in manual lifting.....	49
Chapter 4 Effect of ship motion on spinal loading during manual lifting	67
Chapter 5 Validity of estimates of spinal compression forces obtained from worksite measurements.....	89
Chapter 6 Optimal inertial sensor location for ambulatory measurement of trunk inclination	107
Chapter 7 Determination of joint moments with instrumented force shoes in a variety of tasks	119
Chapter 8 Bottom-up estimation of joint moments during manual lifting using orientation sensors instead of position sensors	133
Chapter 9 Epilogue	147
References	159
Samenvatting	177
Dankwoord	183

PUBLICATIONS BY THE AUTHOR

International Journals

Kingma I, **Faber GS** & van Dieën JH. How to lift a box that is too large to fit between the knees? Submitted.

Faber GS, Kingma I, Schepers HM, Veltink PH & van Dieën JH. Determination of joint moments with instrumented force shoes in a variety of tasks. Submitted. *

Faber GS, Kingma I & van Dieën JH. Effects of horizontal transport and familiarization with different working methods on low back loading in manual lifting. Conditionally accepted in *Ergonomics*. *

Bruijn SM, Ten Kate WR, **Faber GS**, Meijer OG, Beek PJ & van Dieën JH. Estimating Dynamic Gait Stability Using Data from Non-aligned Inertial Sensors. *Annals of Biomedical Engineering* (in press).

van Dieën JH, **Faber GS**, Loos RCC, Kuijer PPFM, Kingma I, Van der Molen HF & Frings-Dresen MHW. Validity of estimates of spinal compression forces obtained from worksite measurements. *Ergonomics* (in press). *

Xu X, Chang CC, **Faber GS**, Kingma I & Dennerlein JT. Interpolation of segment Euler angles can provide a robust estimation of segment angular trajectories during asymmetric lifting tasks. *Journal of Biomechanics* (in press).

Faber GS, Kingma I & van Dieën JH. Bottom-up estimation of joint moments during manual lifting using orientation sensors instead of position sensors. *Journal of Biomechanics* (2010), 43(7), 1432-1436. *
