Return to work for employees with distress

Cost-effectiveness of the participatory workplace intervention
The study presented in this thesis was conducted at the EMGO+ Institute for Health and Care Research, Department of Public and Occupational Health of the VU University Medical Center. The EMGO+ Institute participates in Body@Work, Research Center on Physical Activity, Work and Health, which is a joint initiative of VU University Medical Center (Department of Public and Occupational Health, EMGO Institute for Health and Care Research), VU University Amsterdam, and TNO Quality of Life. The EMGO+ Institute participates in the Netherlands School of Primary Care Research (CaRe) which was re-acknowledged in 2005 by the Royal Netherlands Academy of Arts and Sciences (KNAW).

The study was funded by the STECR Aladdin program. Additional funding has kindly been provided by Body@work Research Center on Physical Activity, Work and Health, Trimbos Institute, Department of General Practice VU University Medical Center, the Occupational Health and Environmental Services of VU University and VU Medical Center, ArboNed, and Corus.

Financial support for the printing of this thesis has been kindly provided by Body@Work Research Center on Physical Activity, Work and Health, the VU University, the Occupational Health and Environmental Services of VU University and VU Medical Center, and the National Institute for Public Health and the Environment.
