Dedicated to the children that have to grow up in war

Every kid is a bomb
which can launch
happiness & joy in the world.

Every gun is a toy in the
hands of a foolish man
and bombs & guns
don't match
and kids & toys
are dangerous,
playful and ignorant.

When they grow up,
they ought to understand
the meaning of pacifism
the meaning of privilege
the meaning of power,
manipulation and
the means of war.

(Jee Kast - 2009)

Table of Contents

I. Introduction

Chapter 1: Problem statement and dissertation structure	10
--	----

II. Problem Statement

Chapter 2: Systematic review of evidence and treatment approaches: Psychosocial and mental health care for children in war	19
--	----

Chapter 3: Comparison of mental health between former child soldiers and children never conscripted by armed groups in Nepal	43
--	----

III. Psychosocial Care Delivery Framework

Chapter 4: Development of a comprehensive psychosocial support system for children in areas of political violence	69
---	----

Chapter 5: Development and validation of the Child Psychosocial Distress Screener in Burundi	91
--	----

Chapter 6: Cross-cultural construct validity of the Child Psychosocial Distress Screener	111
--	-----

Chapter 7: Evaluation of a classroom-based psychosocial intervention in conflict-affected Nepal: A cluster randomized controlled trial	131
--	-----

It is commonly acknowledged that children who undergo violence are at increased risk for psychosocial and mental health problems. Furthermore, we know that most of the political violence takes place in low-income countries where resources for care are extremely limited. How to develop support systems that bridge the treatment gap?

This web-based resource package is an attempt to provide a care delivery framework to set up and provide community-based psychosocial care in conflict-affected settings. It contains information that describes the rationale, content and step-by-step implementation of the separate components of a multi-layered psychosocial care package.
