## Acknowledgements

Chronologically, the journey of this PhD research started several years ago with field campaign(s) in Romania, passed through the University of Karlsruhe and laboratory from Max-Planck Institute in Heidelberg (Germany) and ultimately ended at the Vrije Universiteit Amsterdam (the Netherlands). The product of this work would not have been possible without the support and coordination of my four supervisors: Prof. dr. Cornel Dinu (Bucharest), Dr. Liviu Matenco (Amsterdam), Dr. Werner Fielitz (Karlsruhe) and Prof. dr. Paul Andriessen (Amsterdam).

Thank you Cornel (şefu') and Liviu for giving me the opportunity to do this multi disciplinary project that deepened my understanding of geology of the Carpathians and adjacent basins. And not only geology, but also over life. When you proposed to start this project, I did not know what such a project would imply and how things would come along. However at that time, I did realize that this project might be a 'chance in a life time' for me, a chance that will help me to make a difference in my life. An opportunity for the better that not everyone has it and not every time comes across. It was the beginning of a journey with many challenges, joys and satisfaction, which still continues.

Special thanks to you, Liviu, for guiding me over these past ten years of my Bachelor, Master and PhD studies. I remember how many times you have told me that I should see the big picture and not just the details. You challenged me in changing my way of thinking (geologically) from local to more regional. Repetitive discussions over the same subject(s) made me realise that my stubbornness was not always helpful in solving geological problems. It took me long time (and still do) to understand that a red-corrected text should be regarded as having a positive constructive purpose. I am grateful for all I have learnt from you during these years.

Thank you to all the staff from the University of Bucharest (Geology and Geophysics) for what you have taught me during my Bachelor and Master studies: the geological input for this PhD project.

Werner, I remember how I did arrive in Karlsruhe, where initially I felt lost because I was abroad for the first time in my life. You were there and helped me to integrate quickly and to start the work. Thank you for introducing geomorphology to me and for helping me to map geomorphological features in the field. Your guidance and advice on my first writing struggles helped me, your support with administrative paper issues and relaxing working atmosphere are greatly appreciated.

Luminescence dating at the Max-Planck Institute in Heidelberg would not have been possible without the support from Prof. G.A. Wagner, supervision from Dr. Annette Kade-reit and laboratory assistance from Susanne Lindauer. Thank you, Annette, for spending time with me to analyse and discuss the IRSL data. Thank you, Susanne, for helping me with sample preparation and measurements (the English written instructions were very handy).

Cristina, my Romanian friend in Karlsruhe, I have good memories when I look back at the many evenings that I spent with you (and also with Cornelius). Having someone close to talk about what a PhD life means, about Romania and life challenges was very enjoyable (thank you for birthday cake surprise).

Mulțumesc celor două familii din localitățile Valea Sării și Năruja pentru ospitalitatea și căldura cu care m-au primit în casele lor în timpul campaniilor de teren de pe Valea Putnei.

Marin family is thanked for the moral support, encouragement and welcoming, for the good time spent during the Easter, summer and Christmas holidays during several years. Thank you for the advice once given: Don't give up on your PhD study whatever life brings (Nu renunța la doctorat indiferent de ce ți-se întâmplă în viață).

Amsterdam, Paul Andriessen's isotope group was the final place where my PhD journey brought me. Paul, thank you for giving me the opportunity to learn about age dating in general and thermochronology in particular and for your scientific and non-scientific help that you provided each time I asked for. Introduction of the source to sink concept was very helpful when I had to interpret the data, specially the many provenance ages. Teaching to the Master was a new experience for me that I did enjoy greatly.

Sample preparation and analyses would not have been possible without the help provided by the VU technical team. Dank je wel aan: Tineke, Roel and Maurice for help in mineral separation and sample preparation, Onno and Bart for maintenance of the He line, Bas for U and Th analyses, Richard for help in the clean-lab, Wim for assistance with photographing the apatites, W. van der Plas for maintenance of the microscope.

Fenny Boss (secretary), I am very grateful for your help in dealing with the administrative/paper work during several years.

Thank you to the staff from the Departments of Isotope Geochemistry and Tectonics: Anna, Anco, Dimitrios, Ernst, Fred, Jan, Jurgen, John, Klaudia, Marlies, Sierd and Reini.

Social and scientific life in Amsterdam was very enjoyable in the company of two groups, the Romanian group (Ana, Andrei and Ruxandra, Bebe, Daniel, Ioan, Iuliana and Gabi, Laura, Marius C., Marius T., Radu, Roxana and Sorana) and the International group (Aude, Arnaud, Bad'r, Berny, Cinzia, Endre, Elco, Felipe, Glenda and Björn, Ibrahim, Joaquim, Karen, Magdala, Melanie, Ron, Sandra, Uros and Zsofia). Thank you to: Andrei for geophysical explanations regarding the SE Carpathians basement and the help offered in Amsterdam and Bucharest; Roxana for thesis encouragement, housing and her openness and readiness to give advice and help when I asked for; Aude for introduction to French cuisine; Sandra and Bad'r specially for He measurements performed in Glasgow; Sandra and Elco for housing; Ibrahim for understanding during sample analyses and Joaquim for his patience in explaining what thermochronology means and for showing me what I suppose to do in the laboratory. I did spend good quality time with Alyona and Tristan, Bob, Eudia, Jackie and Hsiang-Ling.

The last two years of my PhD study overlapped with working in consulting geology, firstly in Romania (Danubian team) and secondly in Wales, UK (Tellus group) to whom I am grateful. Many thanks I address to Traian Răbăgia for making it possible for me to visit Amsterdam and for his teaching over facies associations and environmental interpreta-

tion (lithological columns). Mihai Tărăpoancă is thanked for showing me how writing reports is different from papers and for his patience in explaining the details of (structural) cross-section construction from field data.

The latest move on my PhD-journey was to Wales, where Simon Otto and Eugene Iwaniw (Tellus group) have been of great encouragement. They are thanked for letting me visit Amsterdam over the last year to submit and finish this manuscript.

To the reading committee members, I am very grateful for their patience and careful attention they paid to the submitted manuscript, which improved considerably.

Thank you to: Dr. Giovanni Berttotti (VU Amsterdam), Dr. Annette Kadereit (Heidelberg University), Dr. Wout Krijgsman (Utrecht University), Dr. Joaquim Juez-Larré (TNO) and Prof. dr. François Roure (IFP).

Thank you to Jedidja Grooten-Pruis for assistance and help with editing of the thesis.

Hardebol family is specially thanked for the home-feeling atmosphere, for the care and support that they provided during the last year, when I was working on the final stage of the thesis.

Nico: I simply say thank you for who you are and for what you have done/do for me. The life/geological/theological talks that we often had during a bike ride, walks-and-talks, lunchtimes or mountain hiking are dear memories to me. You challenged me in discussions and I am looking forward to have more of them in the future.

Mulțumesc părinților mei Floarea și Ion pentru hotărârea de-a se muta în București, crescându-mi astfel șansele și accesul la o educație mai bună. Poate că anumite lucruri nu au mers întotdeauna așa cum mi-am dorit, însă cu ajutorul vostru am obținut mai mult decât am sperat. Vă mulțumesc pentru că m-ați susținut în tot ceea ce am făcut până acum și că ați fost alături de mine chiar și de la mare distanță. Fiind departe de voi și de familie (Bunica, Daniel, Diana, Alexandu și Titus) nu este tocmai ușor, însă s-a/se merită efortul. Momente plăcute am petrecut în compania prietenilor, Mădălina, Ella, Dana, Vali și Gabi, Andra, Laurențiu, Dana și Franci, Ina și Adi, Betty, Amedeea, Cami și Luci, Maria și Edgar.

And for those that I, unintentionally, have not mentioned: Thank you.
