### CONTENTS

1. Introduction 9

2. Radiation therapy in early stage Hodgkin’s disease: long term results and adverse effects  
   *The Hematology Journal 2002; 3:179-184* 19

3. 18F-Fluoro-deoxyglucose positron emission tomography for post-treatment evaluation of malignant lymphoma: a systematic review  
   *Haematologica 2006; 91:522-529* 33

4. FDG PET in lymphoma: The need for standardization of interpretation. An observer variation study  
   *Nuclear Medicine Communications 2007; 28:798-803* 55

5. 18FDG positron emission tomography versus 67Ga scintigraphy as prognostic test during chemotherapy for non-Hodgkin’s lymphoma  
   *British Journal of Haematology 2003; 123:454-462* 65

7. Early FDG-PET assessment in combination with clinical risk scores determines prognosis in recurring lymphoma  
   *Blood 2007; 109:486-491* 97

8. Use of Positron Emission Tomography for response assessment of lymphoma: Consensus of the imaging subcommittee of International Harmonization Project in lymphoma  
   *Journal of Clinical Oncology 2007; 25:571-578* 115

9. Summary and discussion 131
