## Contents

**Introduction**

1 Theory 3
   1.1 General relativity and gravitational waves 3
   1.2 Sources of gravitational waves 5
      1.2.1 Compact binary coalescence 6
      1.2.2 Bursts 7
      1.2.3 Stochastic background 8
      1.2.4 Continuous waves 8
   1.3 Neutron stars and pulsars 8
      1.3.1 Continuous gravitational waves from neutron stars 9

2 Gravitational wave detection 15
   2.1 Laser-interferometric detectors 15
   2.2 Virgo 20
      2.2.1 Optical design 20
      2.2.2 Suspensions 22
      2.2.3 Noise sources 24
   2.3 Calibration of $h(t)$ in Virgo 25
   2.4 Detector beam-pattern 27
   2.5 Status of Virgo 28

3 Thermal Lensing 31
   3.1 The finite element model 33
   3.2 Simulation results 36
      3.2.1 Steady state thermal analysis 36
      3.2.2 Eigenmodes in thermal equilibrium 39
      3.2.3 Transient temperature analysis 40
   3.3 Optical path length 43
   3.4 Thermal lensing effects in Virgo 44
   3.5 Conclusion and outlook 48
4 Continuous waves analysis methods 51
  4.1 The gravitational wave signal model 52
  4.2 Coherent searches 57
  4.3 Semi-coherent searches 58

5 Polynomial Search 61
  5.1 Doppler shifts of binary systems 61
  5.2 Binary system test cases 63
  5.3 Constructing the filters and the correlations 67
  5.4 Coherence length 71
  5.5 Step size in parameter space 74
  5.6 Constructing the hit maps 81
    5.6.1 False-alarm probability 82
    5.6.2 False-dismissal probability 85
  5.7 Combination of hits 87
    5.7.1 Number count statistics 88
    5.7.2 Renormalized number count 91
    5.7.3 The sensitivity 92
    5.7.4 Consistent filters 96
    5.7.5 The sensitivity with consistent filters 101
  5.8 Results of the simulations 103
  5.9 Discussion and outlook 113
    5.9.1 Follow-up and parameter estimation strategies 115

6 Software and computing 117
  6.1 The AnaPulsar framework 117
  6.2 Computing costs 123

7 Summary 127

A Fourier transform definitions 131

B The correlation statistic 135

C Stepsize plots 139

D AnaPulsar inheritance diagrams 145
