Contents	ix
1 Introduction	1
1.1 Motivation	1
1.2 A General Setup for Financial Data Modeling	3
1.3 Methods	5
1.3.1 Non-parametric volatility measurement	5
1.3.2 Parametric models for volatility	6
1.3.3 Semi-parametric models for volatility	7
1.4 Overview of the Thesis	8
2 Spot variance path estimation and its application to high-frequency jump testing	11
2.1 Introduction	11
2.2 Integrated and Spot Variance	14
2.2.1 General framework	14
2.2.2 Integrated variance	15
2.2.3 Spot variance	17
2.3 Intraday Periodicity	18
2.3.1 Preliminaries	18
2.3.2 Model with periodicity and noise	18
2.3.3 Periodicity extraction	19
2.3.4 Robust estimation of intraday periodicity	20
2.4 Intraday Jump Testing	21
2.4.1 Lee and Mykland test	21
2.4.2 A jump test correction for periodicity and microstructure noise	22
2.5 Monte Carlo Studies	23
2.5.1 Design of Monte Carlo study	23

2.5.2	Periodic patterns in spot variance	24
2.5.3	Spot volatility estimation	26
2.5.4	Intraday jump testing	28
2.6	Testing for Jumps Empirically	34
2.6.1	EUR/USD exchange rate data	34
2.6.2	Estimation of diurnal volatility patterns	34
2.6.3	Spot measures	36
2.6.4	Aggregate evidence of jumps	38
2.6.5	Jumps at specific days	39
2.7	Summary and Conclusions	41
3	Quantile-based realized measure of variation: A new test for outlying observations in financial data	45
3.1	Introduction	45
3.2	The Quantile-based Measurement of Variation	48
3.2.1	Moment-based measurement of variation	48
3.2.2	Quantiles and order statistics	49
3.2.3	Quantile-based measurement of variation and its properties	51
3.2.4	Improving efficiency by combining sub-estimators	53
3.2.5	Finite sample corrections	55
3.3	Derivation of the Outlier Test	57
3.3.1	Joint asymptotics of the two measurements of variation	57
3.3.2	Test statistics	58
3.4	Simulation Results	59
3.4.1	Simulation design	60
3.4.2	Bias of the estimator	61
3.4.3	Size of the test: Distribution under the <i>null</i>	61
3.4.4	Power of the test: Detection of jumps	64
3.5	Empirical Applications	67
3.5.1	Dataset	67
3.5.2	Empirical results	69
3.6	Summary and Conclusions	75
3.A	Appendix	76
3.A.1	Proofs	76
3.A.2	Alternative jump test statistics	78
4	Heavy-tailed density models with long memory dynamics for volatility and dependence	81
4.1	Introduction	81

4.2	Conditional Volatility and Dependence	84
4.2.1	Modeling of returns and volatility	84
4.2.2	Dynamic conditional modeling of volatility	86
4.2.3	Modeling of dependence	89
4.2.4	Dynamic conditional modeling of dependence	91
4.2.5	Estimation of models	92
4.3	Monte Carlo Study	94
4.3.1	Simulation design	94
4.3.2	Simulation results	95
4.4	Empirical Illustrations	97
4.4.1	Data and proxies for latent processes	97
4.4.2	Conditional volatility of returns on equity	99
4.4.3	Conditional dependence between returns on equities	102
4.5	Summary and Conclusions	105
4.A	Appendix	106
4.A.1	Autocorrelation function	106
4.A.2	t density	107
4.B	Maximum likelihood estimation results	108
5	Modeling daily covariance: A joint framework for low and high-frequency based measures	115
5.1	Introduction	115
5.2	Measuring Covariation	118
5.2.1	Covariance estimation in a frictionless market	119
5.2.2	Covariance estimation robust to microstructure noise	119
5.3	Score-based Modeling	121
5.3.1	Matrix notation and definitions	121
5.3.2	Modeling assumptions	122
5.3.3	Modeling strategy	124
5.3.4	The main result	125
5.4	Simulation study	127
5.4.1	Estimation	127
5.4.2	Simulation results	129
5.5	Empirical Illustrations	130
5.5.1	Dataset	130
5.5.2	Capturing overnight variation	131
5.5.3	Benchmarking against common alternatives	133
5.5.4	Parameter stability	137
5.6	Summary and Conclusions	139

5.A Appendix	140
5.A.1 Proofs	140
Bibliography	143
Samenvatting (Summary in Dutch)	155
